1. Safety Cautions

Be sure to read the following safety cautions before conducting repair work. After the repair work is complete, be sure to conduct a test operation to ensure that the equipment operates normally, and explain the cautions for operating the product to the customer.

This manual is for the person in charge of maintenance and inspection.

Caution Items

The caution items are classified into \triangle **Warning** and \triangle **Caution**. The \triangle **Warning** items are especially important since death or serious injury can result if they are not followed closely. The \triangle **Caution** items can also lead to serious accidents under some conditions if they are not followed. Therefore, be sure to observe all the safety caution items described below.

Pictograms

 \triangle This symbol indicates an item for which caution must be exercised.

The pictogram shows the item to which attention must be paid.

◯ This symbol indicates a prohibited action.

The prohibited item or action is shown in the illustration or near the symbol.

This symbol indicates an action that must be taken, or an instruction.

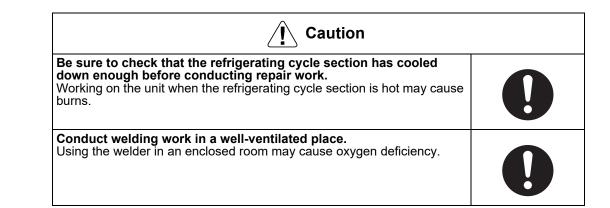

The instruction is shown in the illustration or near the symbol.

1.1 Warnings and Cautions Regarding Safety of Workers

Varning	
Do not store equipment in a room with fire sources (e.g., naked flames, gas appliances, electric heaters).	\bigcirc
Be sure to disconnect the power cable from the socket before disassembling equipment for repair. Working on equipment that is connected to the power supply may cause an electrical shock. If it is necessary to supply power to the equipment to conduct the repair or inspect the circuits, do not touch any electrically charged sections of the equipment.	
If refrigerant gas is discharged during repair work, do not touch the discharged refrigerant gas. Refrigerant gas may cause frostbite.	\bigcirc
When disconnecting the suction or discharge pipe of the compressor at the welded section, evacuate the refrigerant gas completely at a well-ventilated place first. If there is gas remaining inside the compressor, the refrigerant gas or refrigerating machine oil discharges when the pipe is disconnected, and it may cause injury.	0
If refrigerant gas leaks during repair work, ventilate the area. Refrigerant gas may generate toxic gases when it contacts flames.	0

🕐 Warning	
Be sure to discharge the capacitor completely before conducting repair work. The step-up capacitor supplies high-voltage electricity to the electrical components of the outdoor unit. A charged capacitor may cause an electrical shock.	4
Do not turn the air conditioner on or off by plugging in or unplugging the power cable. Plugging in or unplugging the power cable to operate the equipment may cause an electrical shock or fire.	\bigcirc
Be sure to wear a safety helmet, gloves, and a safety belt when working in a high place (more than 2 m (6.5 ft)). Insufficient safety measures may cause a fall.	\bigcirc
In case of R-32 / R-410A refrigerant models, be sure to use pipes, flare nuts and tools intended for the exclusive use with the R-32 / R-410A refrigerant. The use of materials for R-22 refrigerant models may cause a serious accident, such as a damage of refrigerant cycle or equipment failure.	\bigcirc
Do not mix air or gas other than the specified refrigerant (R-32 / R-410A / R-22) in the refrigerant system. If air enters the refrigerant system, an excessively high pressure results, causing equipment damage and injury.	\bigcirc

Caution	
Do not repair electrical components with wet hands. Working on the equipment with wet hands may cause an electrical shock.	
Do not clean the air conditioner with water. Washing the unit with water may cause an electrical shock.	
Be sure to provide an earth / grounding when repairing the equipment in a humid or wet place, to avoid electrical shocks.	ļ
Be sure to turn off the power switch and unplug the power cable when cleaning the equipment. The internal fan rotates at a high speed, and may cause injury.	8-5
Be sure to conduct repair work with appropriate tools. The use of inappropriate tools may cause injury.	0

1.2 Warnings and Cautions Regarding Safety of Users

🚺 Warning	
Do not store the equipment in a room with fire sources (e.g., naked flames, gas appliances, electric heaters).	\bigcirc
Be sure to use parts listed in the service parts list of the applicable model and appropriate tools to conduct repair work. Never attempt to modify the equipment. The use of inappropriate parts or tools may cause an electrical shock, excessive heat generation or fire.	0
If the power cable and lead wires are scratched or have deteriorated, be sure to replace them. Damaged cable and wires may cause an electrical shock, excessive heat generation or fire.	0
Do not use a joined power cable or extension cable, or share the same power outlet with other electrical appliances, since it may cause an electrical shock, excessive heat generation or fire.	\bigcirc
Be sure to use an exclusive power circuit for the equipment, and follow the local technical standards related to the electrical equipment, the internal wiring regulations, and the instruction manual for installation when conducting electrical work. Insufficient power circuit capacity and improper electrical work may cause an electrical shock or fire.	0
Be sure to use the specified cable for wiring between the indoor and outdoor units. Make the connections securely and route the cable properly so that there is no force pulling the cable at the connection terminals. Improper connections may cause excessive heat generation or fire.	0
When wiring between the indoor and outdoor units, make sure that the terminal cover does not lift off or dismount because of the cable. If the cover is not mounted properly, the terminal connection section may cause an electrical shock, excessive heat generation or fire.	0
Do not damage or modify the power cable. Damaged or modified power cables may cause an electrical shock or fire. Placing heavy items on the power cable, or heating or pulling the power cable may damage it.	\bigcirc

Do not mix air or gas other than the specified refrigerant (R-32 / R-410A / R-22) in the refrigerant system. If air enters the refrigerant system, an excessively high pressure results, causing equipment damage and injury.	\bigcirc
If the refrigerant gas leaks, be sure to locate the leaking point and repair it before charging the refrigerant. After charging the refrigerant, make sure that there is no leak. If the leaking point cannot be located and the repair work must be stopped, be sure to pump-down, and close the service valve, to prevent refrigerant gas from leaking into the room. Refrigerant gas itself is harmless, but it may generate toxic gases when it contacts flames, such as those from fan type and other heaters, stoves and ranges.	0
When relocating the equipment, make sure that the new installation site has sufficient strength to withstand the weight of the equipment. If the installation site does not have sufficient strength or the installation work is not conducted securely, the equipment may fall and cause injury.	0
Check to make sure that the power cable plug is not dirty or loose, then insert the plug into a power outlet securely. If the plug is dusty or has a loose connection, it may cause an electrical shock or fire.	0
When replacing the coin battery in the remote controller, be sure to dispose of the old battery to prevent children from swallowing it. If a child swallows the coin battery, see a doctor immediately.	0

Installation of a leakage breaker is necessary in some cases depending on the conditions of the installation site, to prevent electrical shocks.	0
Do not install the equipment in a place where there is a possibility of combustible gas leaks. If combustible gas leaks and remains around the unit, it may cause a fire.	\bigcirc
Check to see if parts and wires are mounted and connected properly, and if connections at the soldered or crimped terminals are secure. Improper installation and connections may cause excessive heat generation, fire or an electrical shock.	0
If the installation platform or frame has corroded, replace it. A corroded installation platform or frame may cause the unit to fall, resulting in injury.	0
Check the earth / grounding, and repair it if the equipment is not properly earthed / grounded. Improper earth / grounding may cause an electrical shock.	

Be sure to measure insulation resistance after the repair, and make sure that the resistance is 1 M Ω or higher. Faulty insulation may cause an electrical shock.	0
Be sure to check the drainage of the indoor unit after the repair. Faulty drainage may cause water to enter the room and wet the furniture and floor.	0
Do not tilt the unit when removing it. The water inside the unit may spill and wet the furniture and floor.	\bigcirc

2. Icons Used

The following icons are used to attract the attention of the reader to specific information.

Icon	Type of Information	Description
Warning	Warning	Warning is used when there is danger of personal injury.
Caution	Caution	Caution is used when there is danger that the reader, through incorrect manipulation, may damage equipment, lose data, get an unexpected result or have to restart (part of) a procedure.
1 Note	Note	Note provides information that is not indispensable, but may nevertheless be valuable to the reader, such as tips and tricks.
Reference	Reference	Reference guides the reader to other places in this binder or in this manual, where he/she will find additional information on a specific topic.

Common Functions Temperature Control

Definitions of Temperatures

The definitions of temperatures are classified as following.

- Room temperature: temperature of lower part of the room
- Set temperature: temperature set by remote controller
- Room thermistor temperature: temperature detected by room temperature thermistor
- Target temperature: temperature determined by microcomputer

★ The illustration is for wall mounted type as representative.

Temperature Control

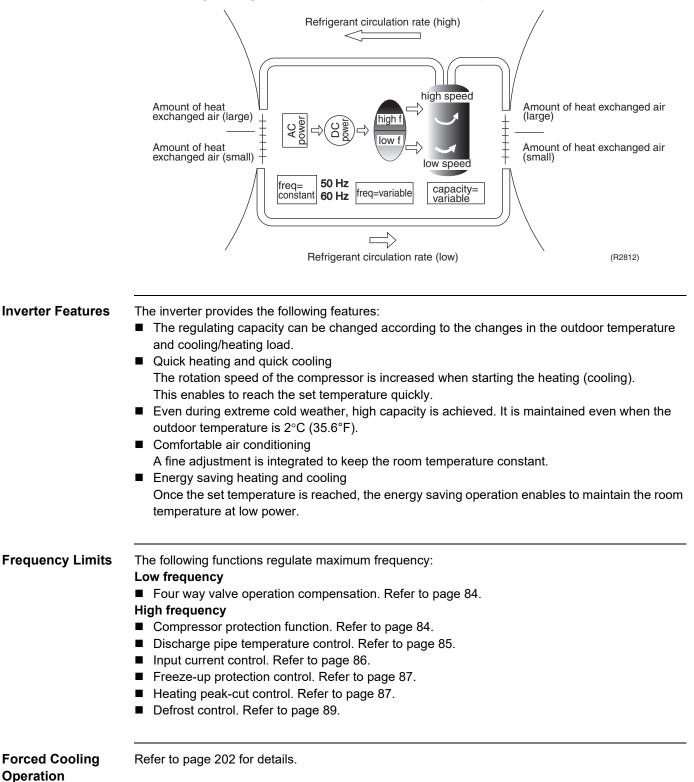

The temperature of the room is detected by the room temperature thermistor. However, there is a difference between the temperature detected by room temperature thermistor and the temperature of lower part of the room, depending on the type of the indoor unit or installation condition. In practice, the temperature control is done by the target temperature appropriately adjusted for the indoor unit and the temperature detected by room temperature thermistor.

1.2 Frequency Principle

Control Parameters	 The frequency of the compressor is controlled by the following 2 parameters: The load condition of the operating indoor unit The difference between the room thermistor temperature and the target temperature
	 The target frequency is adapted by additional parameters in the following cases: Frequency restrictions Initial settings Forced cooling operation
Inverter Principle	To regulate the capacity, a frequency control is needed. The inverter makes it possible to control the rotation speed of the compressor. The followings explain the inverter principle:
	Phase 1 The supplied AC power source is converted into the DC power source for the present.
	Phase 2 The DC power source is reconverted into the three phase AC power source with variable frequency.

- When the frequency increases, the rotation speed of the compressor increases resulting in an increase of refrigerant circulation. This leads to a larger amount of heat exchange per unit.
- When the frequency decreases, the rotation speed of the compressor decreases resulting in a decrease of refrigerant circulation. This leads to a smaller amount of heat exchange per unit.

The following drawing shows a schematic view of the inverter principle:

2. Functions for FTX, FVXS Series 2.1 Airflow Direction Control

Power-Airflow (Dual) Flap(s)

The large flap sends a large volume of air downward to the floor and provides an optimum control in cooling, dry and heating operation.

Cooling/Dry

During cooling or dry operation, the flap retracts into the indoor unit. Then, cool air can be blown far and distributed all over the room.

Heating

During heating operation, the large flap directs airflow downward to spread the warm air to the entire room.

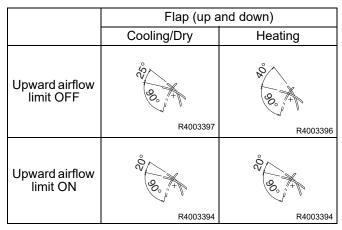

Wide-AngleThe louvers, made of elastic synthetic resin, provide a wide range of airflow that guaranteesLouverscomfortable air distribution.

Auto-Swing The following tables explain the auto-swing process for cooling, dry, heating and fan:

FTX series

	Flap (up and down)			Louver
	Cooling/Dry	Heating	Fan	(right and left)
09/12 class	5° 50° (R21048)	15° 65° (R21049)	0° +	_
15 class	15° 30° 55° 70° (R21651)	20° 35° 80° 65° (R21652)	10° 25° 80° 65° (R21653)	_
18/24 class	15° 25° 50° 60° (R9303)	30°, 40°75° 70° (R9304)	15° , 4 25° 75° 70° (R9305)	(R9306)

FVXS series

3-D Airflow

FTX18/24UVJU only

Alternative repetition of vertical and horizontal swing motions enables uniform air-conditioning of the entire room.

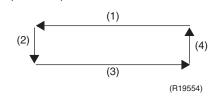

When the horizontal swing and vertical swing are both set to automatic operation, the airflow becomes 3-D airflow. The horizontal and vertical swing motions are alternated and the airflow direction changes in the order shown in the following diagram.

(1) The vertical blades (louvers) move from the right to the left.

(2) The horizontal blades (flaps) move downward.

(3) The vertical blades (louvers) move from the left to the right.

(4) The horizontal blades (flaps) move upward.

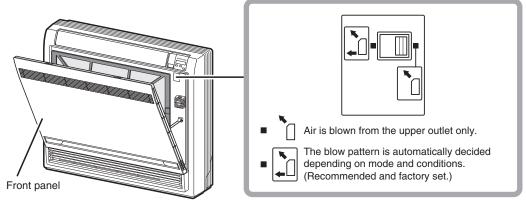

Airflow Selection Setting

FVXS Series

Airflow direction can be set with the airflow selection switch.

Open the front panel.

(R17866)

Before opening the front panel, be sure to stop the operation and turn the breaker off. Do not touch the aluminum fins (indoor heat exchanger) inside the indoor unit, as it may result in injury.

When setting the airflow selection switch to .

The air conditioner automatically decides the appropriate blowing pattern depending on the operating mode/situation.

Operating mode	Situation	Blowing pattern	
Cooling	When the operation is activated or when the room is not fully cooled.		Air is blown from the upper and lower air outlets in order to reach the set temperature quickly.
	When the room has become fully cool, or when 1 hour has passed since turning on the air conditioner.		Air is blown only from the upper air outlet so that air does not come into direct contact with people and indoor temperature is equalized.
	When the operation is activated or when air emitted is of low temperature.		Air is blown only from the upper air outlet so that air does not come into direct contact with people.
Heating	At times other than the above situations.		Air is blown from the upper and lower air outlets so that warm air is spread throughout the whole room.
Dry	Whenever in DRY mode.		Air is blown only from the upper air outlet so that air does not come into direct contact with people.
Fan	Whenever in FAN mode.		_
Automatic	Operates in the actual operation mode of the air conditioner according to the descriptions in this table. (COOL or HEAT)		

• During dry operation, air is blown from upper air outlet, so that cold air does not come into direct contact with people.

When setting the airflow selection switch to .

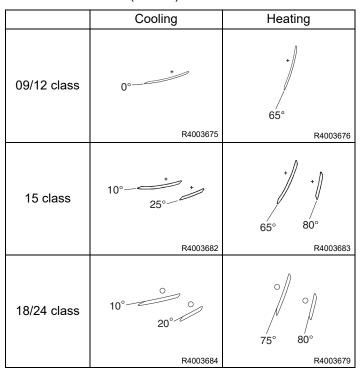

- Regardless of the operating mode or situation, air is blown from the upper air outlet.
- Use this switch when you do not want air coming out of the lower air outlet (e.g., while sleeping).

2.2 COMFORT AIRFLOW Operation

Applicable Models FTX09/12/15NMVJU FTX18/24UVJU

Outline

The horizontal blades (louvers) are controlled not to blow the air directly at the people in the room.

The fan speed is controlled automatically within the following steps. Cooling

L tap ~ MH tap (same as automatic) **Heating**

L tap ~ M tap

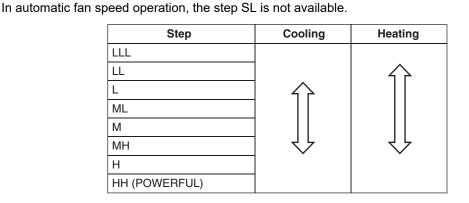

■ The latest command has the priority between POWERFUL and COMFORT AIRFLOW.

2.3 Fan Speed Control for Indoor Unit

Outline

Phase control and fan speed control contains 9 steps: LLL, LL, SL, L, ML, M, MH, H, and HH. The airflow rate can be automatically controlled depending on the difference between the room thermistor temperature and the target temperature.

Automatic Fan Speed Control

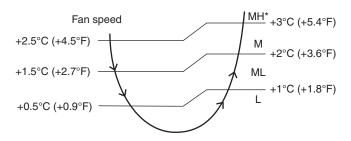

R4003512

 $\langle --- \rangle$ = The airflow rate is automatically controlled within this range when **FAN** setting button is set to <u>automatic</u>.

Cooling

The following drawing explains the principle of fan speed control for cooling.

Room thermistor temperature - target temperature

(R21654)

* The upper limit is at M tap in 30 minutes from the operation start.

Heating

In heating operation, the fan speed is regulated according to the indoor heat exchanger temperature and the difference between the room thermistor temperature and the target temperature.

The fan stops during defrost operation.

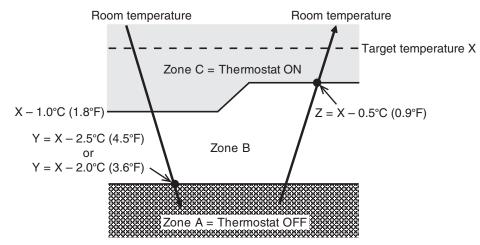

2.4 Program Dry Operation

Outline

Program dry operation removes humidity while preventing the room temperature from lowering. Since the microcomputer controls both the temperature and airflow rate, the temperature adjustment and **FAN** setting buttons are inoperable.

Details

The microcomputer automatically sets the temperature and airflow rate. The difference between the room thermistor temperature at start-up and the target temperature is divided into two zones. Then, the unit operates in an appropriate capacity for each zone to maintain the temperature and humidity at a comfortable level.

(R23000)

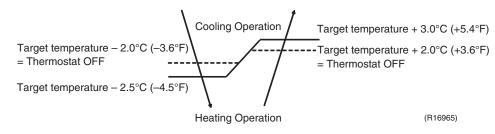

Room thermistor temperature at start-up	Target temperature	Thermostat OFF point	Thermostat ON point
	X	Y	Z ★
24°C or more	Room thermistor	X – 2.5°C	X – 0.5°C
(75.2°F or more)		(X – 4.5°F)	(X – 0.9°F)
18 ~ 23.5°C	temperature at start-up	X – 2.0°C	X – 0.5°C
(64.4 ~ 74.3°F)		(X – 3.6°F)	(X – 0.9°F)
17.5°C or less	18°C	X – 2.0°C	X – 0.5°C = 17.5°C
(63.5°F or less)	(64.4°F)	(X – 3.6°F)	(X – 0.9°F = 63.5°F)

 \star Thermostat turns on also when the room temperature is in the zone B for 10 minutes.

2.5 Automatic Cooling/Heating Changeover

Outline	When the automatic operation is selected with the remote controller, the microcomputer automatically determines the operation mode as cooling or heating according to the room temperature and the set temperature at start-up. The unit automatically switches the operation mode to maintain the room temperature at the set temperature.
Details	Ts: set temperature (set by remote controller) Tt: target temperature (determined by microcomputer) Tr: room thermistor temperature (detected by room temperature thermistor) C: correction value
	 The set temperature (Ts) determines the target temperature (Tt). (Ts = 18 ~ 30°C (64.4 ~ 86°F)) The target temperature (Tt) is calculated as; Tt = Ts + C where C is the correction value. C = 0°C (0°F) Thermostat ON/OFF point and operation mode switching point are as follows. (1) Heating → Cooling switching point: Tr ≥ Tt + 3.0°C (+ 5.4°F) (2) Cooling → Heating switching point: Tr < Tt - 3.0°C (- 5.4°F) (FTX09/12/15NMVJU) Tr < Tt - 2.5°C (- 4.5°F) (FTX18/24UVJU) (3) Thermostat ON/OFF point is the same as the ON/OFF point of cooling or heating operation. During initial operation Tr ≥ Ts : Cooling operation Tr < Ts : Heating operation
	FTX09/12/15NMVJU, FVXS Series Target temperature -2.0° C (-3.6° F) = Thermostat OFF Target temperature -3.0° C (-5.4° F) = Thermostat OFF Target temperature -3.0° C (-5.4° F) = Thermostat OFF Target temperature is 25°C (77°F) Cooling $\rightarrow 23^{\circ}$ C (73.4° F): Thermostat OFF $\rightarrow 22^{\circ}$ C (71.6° F): Switch to heating Heating $\rightarrow 27^{\circ}$ C (80.6° F): Thermostat OFF $\rightarrow 28^{\circ}$ C (82.4° F): Switch to cooling

FTX18/24UVJU

Ex: When the target temperature is 25°C (77°F) Cooling \rightarrow 23°C (73.4°F): Thermostat OFF \rightarrow 22.5°C (72.5°F): Switch to heating Heating \rightarrow 27°C (80.6°F): Thermostat OFF \rightarrow 28°C (82.4°F): Switch to cooling

Thermostat Control 2.6

Outline

Thermostat control is based on the difference between the room thermistor temperature and the target temperature.

Details

Thermostat OFF Condition

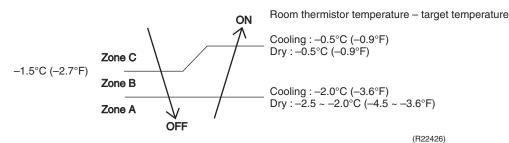

The temperature difference is in the zone A.

Thermostat ON Conditions

- The temperature difference returns to the zone C after being in the zone A.
- The system resumes from defrost control in any zones except A.
- The operation turns on in any zones except A.
- The temperature difference remains in zone B for the determined monitoring time.

	Cooling	Dry	Heating
FTX09/12/15NMVJU	10 minutes	7.5 minutes	10 seconds
FTX18/24UVJU	10 minutes	10 minutes	10 seconds
FVXS series	10 minutes	10 minutes	10 seconds

FVXS Series

(R22428)

Reference Refer to Temperature Control on page 47 for details.

(R23918)

2.7 NIGHT SET Mode

Outline

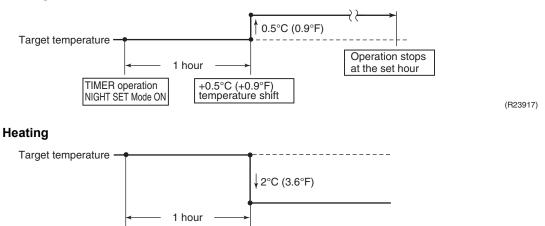

When the OFF TIMER is set, NIGHT SET mode is automatically activated. NIGHT SET mode keeps the airflow rate setting.

Details

NIGHT SET mode continues operation at the target temperature for the first one hour, then automatically raises the target temperature slightly in the case of cooling, or lowers the target temperature slightly in the case of heating. This prevents excessive cooling in summer and excessive heating in winter to ensure comfortable sleeping conditions, and also conserves electricity.

Cooling

TIMER operation NIGHT SET Mode ON

-2°C (-3.6°F) temperature shift

Part 4 Functions and Control

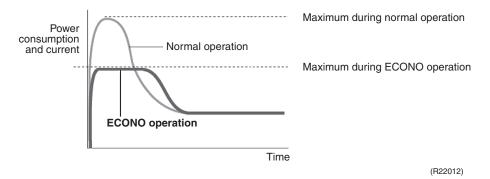

2.8 ECONO Operation

Outline

ECONO operation reduces the maximum operating current and the power consumption. This operation is particularly convenient for energy-saving. It is also a major bonus when breaker capacity does not allow the use of multiple electrical devices and air conditioners. It can be easily activated by pressing **ECONO** or **Econo/Quiet** button on the wireless remote controller.

Details

- When this function is activated, the maximum capacity also decreases.
- The remote controller can send the ECONO command when the unit is in cooling, heating, dry, or automatic operation. This function can only be set when the unit is running. To cancel the ECONO operation, press ECONO or Econo/Quiet button several times until the ECONO symbol on the remote controller disappears.
- This function and POWERFUL operation cannot be used at the same time. The latest command has the priority.

Part 4 Functions and Control

2.9 INTELLIGENT EYE Operation

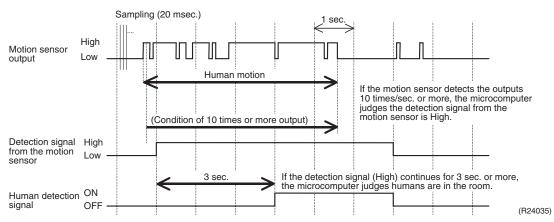

Applicable Models FTX18/24UVJU

Outline

The microcomputer detects the presence of humans in the room with a motion sensor and reduces the capacity when there is nobody in the room in order to save electricity.

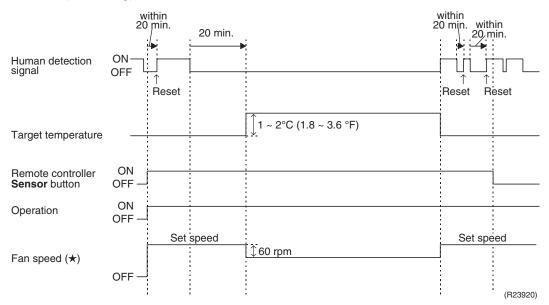

Details

1. INTELLIGENT EYE detection method

- The motion sensor detects human motion by receiving infrared rays and sends the pulse wave output.
- The microcomputer in the indoor unit carries out a sampling every 20 msec. If the motion sensor detects 10 times or more of the wave output in one second in total, and the High signal continues for 3 sec., the microcomputer judges humans are in the room as the human detection signal is ON.

2. Motions (in cooling)

- \star In FAN operation, the fan speed is reduced by 60 rpm when no one is in the area.
- When there is no signal from the motion sensor in 20 minutes, the microcomputer judges that nobody is in the room and operates the unit at a temperature shifted from the target temperature. (Cooling/Dry: 1 ~ 2°C (1.8 ~ 3.6°F) higher, Heating: 2°C (3.6°F) lower, Auto: according to the operation mode at that time)

For dry operation, the temperature cannot be set with a remote controller, but the target temperature is shifted internally.

2.10 POWERFUL Operation

Outline

In order to exploit the cooling and heating capacity to full extent, the air conditioner can be operated by increasing the indoor fan rotating speed and the compressor frequency.

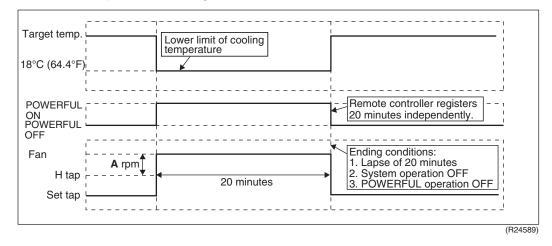

Details

When **POWERFUL** button is pressed, the fan speed and target temperature are converted to the following states for 20 minutes.

Operation mode	Fan speed	Target temperature
COOL	H tap + A rpm	18°C (64.4°F)
DRY	Dry rotating speed + A rpm	Lowered by 2.5°C (4.5°F)
HEAT	H tap + A rpm	В
FAN	H tap + A rpm	—
AUTO	Same as cooling/heating in POWERFUL operation	The target temperature is kept unchanged.

- A = FTX09/12/15NMVJU: 80 (rpm) FTX18/24UVJU: 50 (rpm) FVXS series: 30 ~ 40 (rpm)
- B = FTX09/12/15NMVJU: 31°C (87.8°F) FTX18/24UVJU: 31.5°C (88.7°F) FVXS series: 32°C (89.6°F)

Ex: POWERFUL operation in cooling

 POWERFUL operation cannot be used together with ECONO, COMFORT AIRFLOW, or OUTDOOR UNIT QUIET operation.

2.11 Clock Setting

ARC466 Series

- The clock can be set by taking the following steps:
- 1. Press Clock button.
 - \rightarrow $\square:\square\square$ is displayed, then **MON** and O blink.
- 2. Press **Select** \blacktriangle or **Select** \blacktriangledown button to set the clock to the current day of the week.
- 3. Press **Clock** button.
- $\rightarrow \bigcirc$ blinks.
- Press Select ▲ or Select ▼ button to set the clock to the present time.
 Holding down Select ▲ or Select ▼ button rapidly increases or decreases the time display.
- 5. Press **Clock** button to set the clock. Point the remote controller at the indoor unit when pressing the button.
 - \rightarrow : blinks and clock setting is completed.

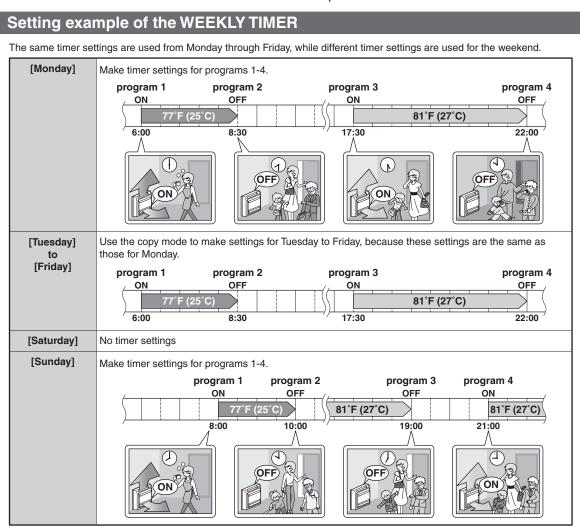

2.12 WEEKLY TIMER Operation

Applicable	FTX18/24UVJU
Models	FVXS09/12/15NVJU
Outline	Up to 4 timer settings can be saved for each day of the week (up to 28 settings in total).

Details

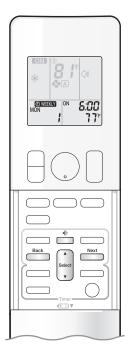

★ The illustrations are for FVXS series as representative.

The 3 items: ON/OFF, temperature, and time can be set.

• Up to 4 reservations per day and 28 reservations per week can be set using the WEEKLY TIMER. The effective use of the copy mode simplifies timer programming.

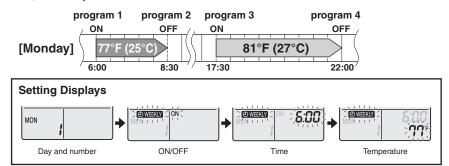

• The use of ON-ON-ON settings, for example, makes it possible to schedule operating mode and set temperature changes. Furthermore, by using OFF-OFF-OFF-OFF settings, only the turn off time of each day can be set. This will turn off the air conditioner automatically if you forget to turn it off.

To use WEEKLY TIMER operation

Setting mode

• Make sure the day of the week and time are set. If not, set the day of the week and time.

1. Press 🚔

- The day of the week and the reservation number of the current day will be displayed.
- 1 to 4 settings can be made per day.

2. Press to select the desired day of the week and reservation number.

• Pressing seed changes the reservation number and the day of the week.

3. Press

- The day of the week and reservation number will be set.
- " WEEKLY " and " ON" blink.

4. Press **being** to select the desired mode.

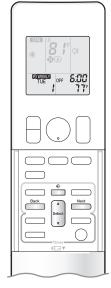

• Pressing changes the "ON" or " OFF " setting in sequence.

- In case the reservation has already been set, selecting " blank " deletes the reservation.
- Proceed to STEP 9 if " blank " is selected.
- To return to the day of the week and reservation number setting, press

- The ON/OFF TIMER mode will be set.
- " OWEEKLY " and the time blink.

6. Press state to select the desired time.

- The time can be set between 0:00 and 23:50 in 10-minute intervals.
- To return to the ON/OFF TIMER mode setting, press
- Proceed to STEP 9 when setting the OFF TIMER.

7. Press

- The time will be set.
- " OWEEKLY " and the temperature blink.

8. Press 🔤 to select the desired temperature.

- The temperature can be set between 50°F (10°C) and 90°F (32°C).
- COOL or AUTO: The unit operates at 64°F (18°C) even if it is set at 50°F (10°C) to 63°F (17°C). HEAT or AUTO : The unit operates at 86°F (30°C) even if it is set at 87°F (31°C) to 90°F (32°C). • To return to the time setting, press $\frac{Beck}{D}$.
- The set temperature is only displayed when the mode setting is on.

Next **9.** Press ٦.

- The temperature will be set and go to the next reservation setting.
- The temperature is set while in ON TIMER operation, and the time is set while in OFF TIMER operation.
- The next reservation screen will appear.
- To continue further settings, repeat the procedure from STEP 4.

10. Press $\stackrel{\diamond}{\longrightarrow}$ to complete the setting.

- · Be sure to direct the remote controller toward the indoor unit and check for a receiving tone and blinking of the OPERATION lamp.
- " OWEEKLY " is displayed on the LCD and WEEKLY TIMER operation is activated.
- The TIMER lamp lights orange.

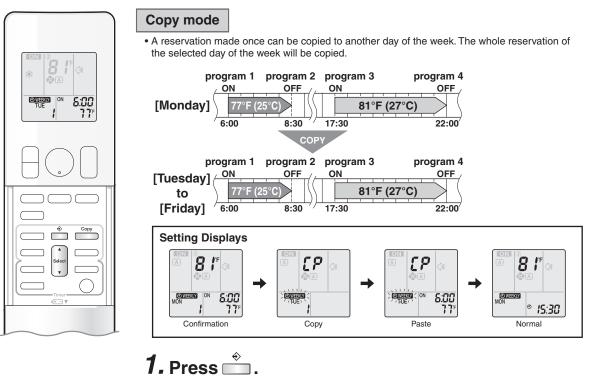

• A reservation made once can be easily copied and the same settings used for another day of the week. Refer to Copy mode

NOTE

Notes on WEEKLY TIMER operation

- . Do not forget to set the clock on the remote controller first.
- The day of the week, ON/OFF TIMER mode, time and set temperature (only for ON TIMER mode) can be set with the WEEKLY TIMER.
- Other settings for the ON TIMER are based on the settings just before the operation. WEEKLY TIMER and ON/OFF TIMER operation cannot be used at the same time. The ON/OFF TIMER operation has priority if it is set while WEEKLY TIMER is still active. The WEEKLY TIMER will enter the standby state, and " WEEKLY " will disappear from the LCD. When the ON/ OFF TIMER is up, the WEEKLY TIMER will automatically become active.
- Only the time and set temperature with the WEEKLY TIMER are sent with the 👛 . Set the WEEKLY TIMER only after setting the operation mode, the airflow rate and the airflow direction ahead of time.
- Turning off the circuit breaker, power failure, and other similar events will render operation of the indoor unit's internal clock inaccurate. Reset the clock.
- at a can be used only for the time and temperature settings. It cannot be used to go back to the reservation number.

I. Press . *2*. Press to confirm the day of the week to be copied.

3. Press . • The whole reservation of the selected day of the week will be copied.

4. Press $\begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$ to select the destination day of the week.

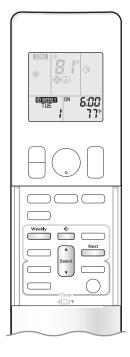

- The reservation will be copied to the selected day of the week. The whole reservation of the selected day of the week will be copied.
- To continue copying the settings to other days of the week, repeat STEP 4 and STEP 5.

6. Press $\stackrel{\circ}{=}$ to complete the setting.

- " @WEEKLY " is displayed on the LCD and WEEKLY TIMER operation is activated.
- The TIMER lamp periodically lights orange.

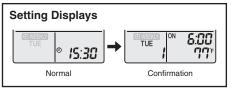

NOTE

Note on COPY MODE
The entire reservation of the source day of the week is copied in the copy mode.
In the case of making a reservation change for any day of the week individually after copying the content of weekly reservations, press 📩 and
change the settings in the steps of Setting mode.

Confirming a reservation

• The reservation can be confirmed.

• The day of the week and the reservation number of the current day will be displayed.

2. Press to select the day of the week and the reservation number to be confirmed.

- Pressing select displays the reservation details.
- To change the confirmed reserved settings, select the reservation number and press _____. The mode is switched to setting mode. Proceed to Setting mode STEP 4.

3. Press $\stackrel{\diamond}{=}$ to exit the confirmation mode.

- " OWEEKLY " is displayed on the LCD and WEEKLY TIMER operation is activated.
- The TIMER lamp lights orange.

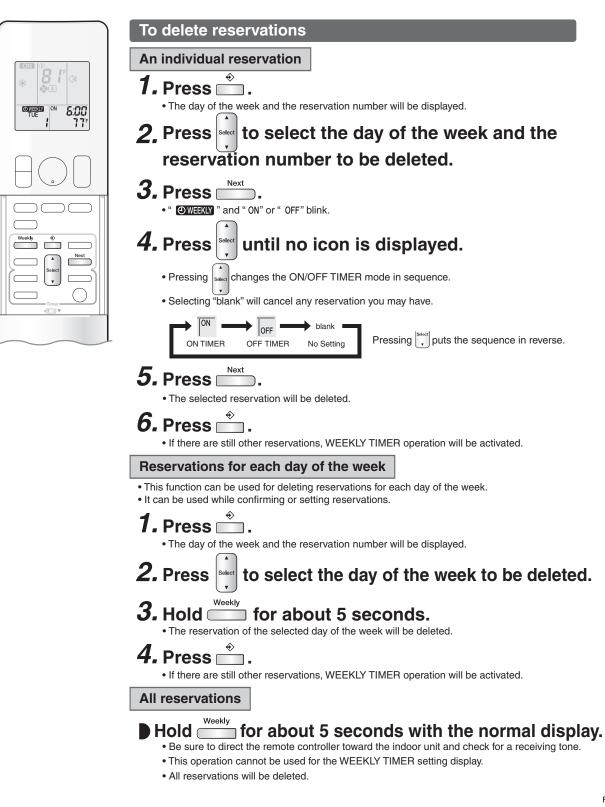

Display

To deactivate WEEKLY TIMER operation

- Press while "OWEEKLY" is displayed on the LCD.
 - " OWEEKLY " disappears from the LCD.
 - The TIMER lamp goes off.
 - To reactivate the WEEKLY TIMER operation, press again.
 - If a reservation deactivated with weeky is activated once again, the last reservation mode will be used.

NOTE

• If not all the reservation settings are reflected, deactivate the WEEKLY TIMER operation once. Then press again to reactivate the WEEKLY TIMER operation.

2.13 Other Functions

2.13.1 Hot-Start Function

In order to prevent the cold air blast that normally occurs when heating operation is started, the temperature of the indoor heat exchanger is detected, and the airflow is either stopped or significantly weakened resulting in comfortable heating.

The cold air blast is prevented using similar control when defrost control starts or when the thermostat is turned ON.

2.13.2 Signal Receiving Sign

When the indoor unit receives a signal from the remote controller, the unit emits a signal receiving sound.

2.13.3 Indoor Unit ON/OFF Switch

ON/OFF switch is provided on the display of the unit.

- Press ON/OFF switch once to start operation. Press once again to stop it.
- ON/OFF switch is useful when the remote controller is missing or the battery has run out.

Operation mode	Temperature setting	Airflow rate		
AUTO	25°C (77°F)	Automatic		

FTX09/12/15NMVJU

FTX18/24UVJU

FVXS Series

Forced Cooling Operation

Forced cooling operation can be started by pressing **ON/OFF** switch for 5 to 9 seconds while the unit is not operating.

Refer to page 202 for details.

Note(s)

Forced cooling operation is not started if **ON/OFF** switch is pressed for 10 seconds or more.

2.13.4 Auto-restart Function

If a power failure (even a momentary one) occurs during the operation, the system restarts automatically in the same conditions as before when the power supply is restored to the conditions prior to the power failure.

It takes 3 minutes to restart the operation because 3-minute standby function is activated.

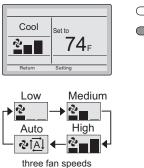

3. Functions for FDMQ Series

3.1 Fan Speed Control for Indoor Unit

With Wired Remote Controller (BRC1E73)

To change the fan speed, press **Fan Speed** button and select the fan speed from Low/Medium/High/Auto.

- Auto cannot be selected if the indoor unit does not have Auto Fan speed function.
- The system may change the fan speed automatically for equipment protection purposes.
- The system may turn off the fan when the room temperature is satisfied.
- It is normal for a delay to occur when changing the fan speed.
- If the Auto is selected for the fan speed, the fan speed varies automatically based on the difference between set temperature and room temperature.

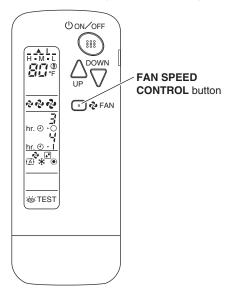

R4003380

With Wireless Remote Controller (BRC082A43) Press FAN SPEED CONTROL button.

High, Medium or Low fan speed can be selected.

The microchip may sometimes control the fan speed in order to protect the unit.

R4003666

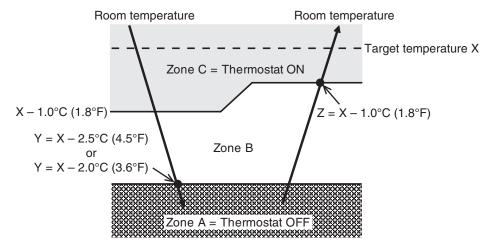

3.2 Program Dry Operation

Outline

Program dry operation removes humidity while preventing the room temperature from lowering. Since the microcomputer controls both the temperature and airflow rate, the temperature adjustment and **FAN** setting buttons are inoperable.

Details

The microcomputer automatically sets the temperature and airflow rate. The difference between the room thermistor temperature at start-up and the target temperature is divided into two zones. Then, the unit operates in an appropriate capacity for each zone to maintain the temperature and humidity at a comfortable level.

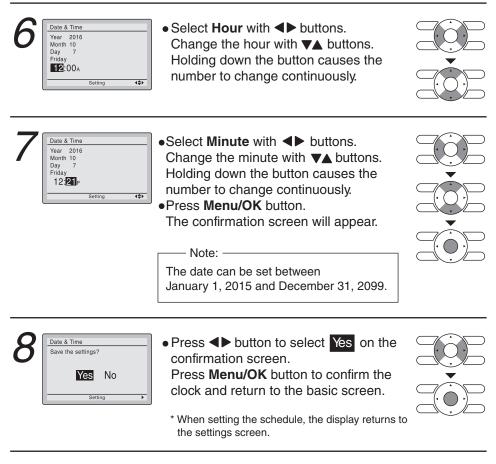

(R23000)

Room thermistor temperature at start-up	Target temperature	Thermostat OFF point	Thermostat ON point
	X	Y	Z
24.5°C or more	Room thermistor	X – 2.5°C	X – 1.0°C
(76.1°F or more)		(X – 4.5°F)	(X – 1.8°F)
16.5 ~ 24°C	temperature at start-up	X – 2.0°C	X – 1.0°C
(61.7 ~ 75.2°F)		(X – 3.6°F)	(X – 1.8°F)
16°C or less	16°C	X – 2.0°C	X – 1.0°C = 15°C
(60.8°F or less)	(60.8°F)	(X – 3.6°F)	(X – 1.8°F = 59°F)

3.3 Clock and Calender Setting (With BRC1E73)

1	Filter Auto Clean Maintenance Information	 Press Menu/OK button to display the main menu screen. Press VA buttons to select Clock & Calendar on the main menu screen. Press Menu/OK button to display the clock & calendar screen. 	
2	Clock & Calendar Date & Time 12H/24H Clock Setting	 Press ▼▲ buttons to select Date & Time on the clock & calendar screen. Press Menu/OK button to display the date & time screen. 	
3	Date & Time Year 2015 Month 1 Days 1 Thursday 12:00A Satting 4\$	 Select Year with ◄ buttons. Change the year with ▼▲ buttons. Holding down the button causes the number to change continuously. 	
4	Date & Time Year 2016 Month ID Day 1 Saturday 12:00A Setting	 Select Month with ◄► buttons. Change the month with ▼▲ buttons. Holding down the button causes the number to change continuously. 	
5	Date & Time Year 2016 Month 10 Day Z Friday 12:00A	 Select Day with ◄► buttons. Change the day with ▼▲ buttons. Holding down the button causes the number to change continuously. Days of the week change automatically. 	

(R24368)

(R24072)

3.4 Schedule Timer Operation (With BRC1E73)

Day settings are selected from 4 patterns:

- 7 Days
- Weekday/Sat/Sun
- Weekday/Weekend
- Everyday

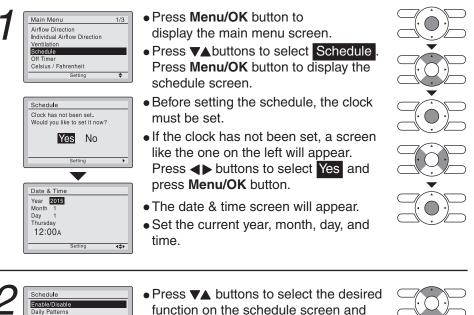

Up to 5 actions can be set for each day.

Details

Set the startup time and operation stop time.

- ON: Startup time, cooling and heating temperature setpoints can be configured.
- OFF: Operation stop time, cooling and heating setback temperature setpoints can be configured.
 - (--: Indicates that the setback function is disabled for this time period.)
- _: Indicates that the temperature setpoint and setback temperature setpoint for this time period is not specified. The last active setpoint will be utilized.
- Setting the schedule

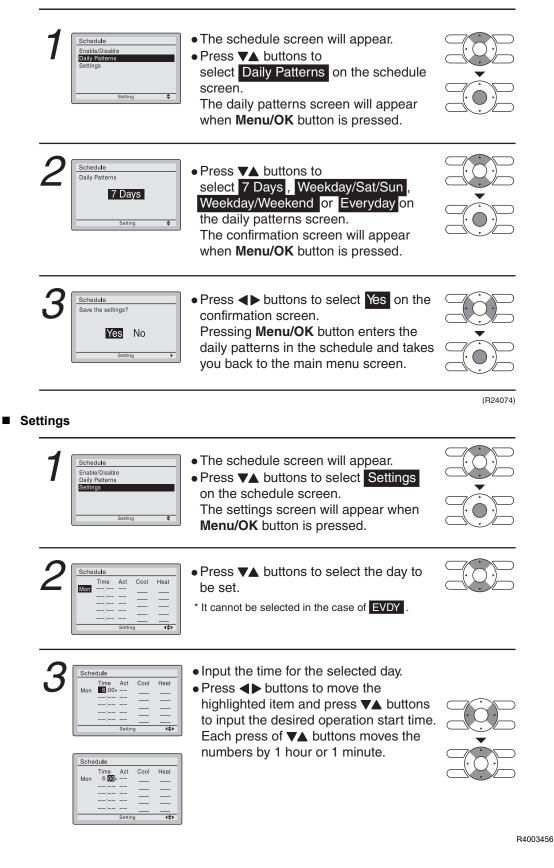

Settings

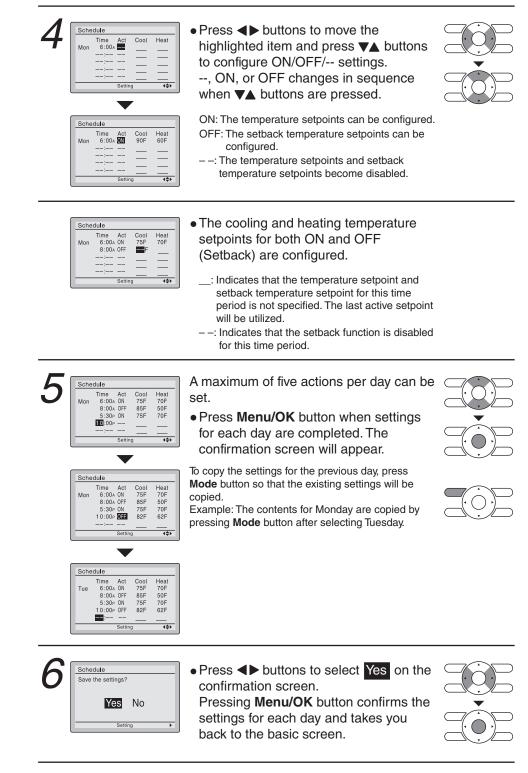

(R24369)

Daily Patterns

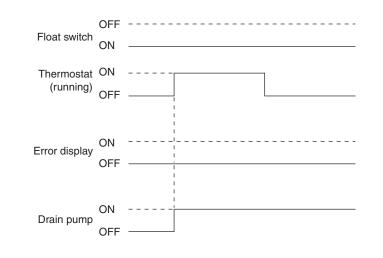

(R24075)

• Display the schedule screen. Schedule Enable/Disable Daily Patterns Press ▼▲ buttons to select Settings Enable / Disable on the schedule screen. Press Menu/OK button to display the enable/disable screen. ● Press ▼▲ buttons to select Enable Schedule Enable/Disable or Disable on the enable/disable Disable screen. Press Menu/OK button after selecting Setting the item. The confirmation screen is displayed. • Press < > buttons to select Yes on the Schedule Save the settings? confirmation screen. Pressing Menu/OK button confirms the Yes No enable/disable setting for the schedule and takes you back to the basic screen.

Enabling or disabling the schedule

3.5 Drain Pump Control

Normal Operation

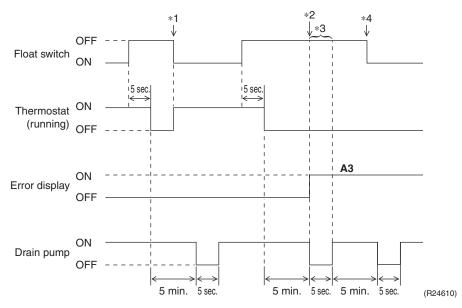

(R24037)

- The float switch is ON in normal operation.
- When cooling operation starts (thermostat ON), the drain pump turns ON simultaneously.
- After the thermostat turns OFF, the drain pump continues to operate.

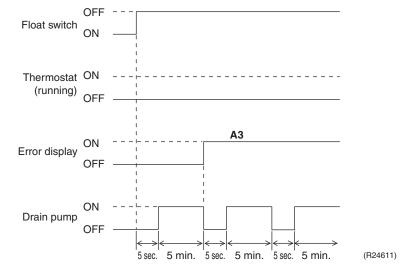

R4003458

If Float Switch is OFF with Thermostat ON in Cooling Operation

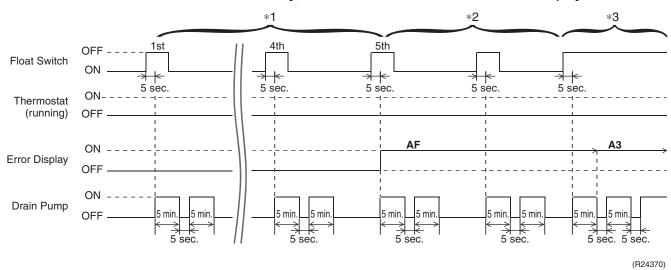

- When the float switch stays OFF for 5 sec., the thermostat turns OFF.
- After the thermostat turns OFF, the drain pump continues to operate for another 5 minutes.
- *1. If the float switch turns ON again during the residual operation of the drain pump, cooling operation also turns on again (thermostat ON).
- *2. If the float switch remains OFF even after the residual operation of the drain pump has ended, the error code **A3** is determined.
- *3. The drain pump turns OFF once residual operation has ended, then turns ON again after 5 seconds.
- *4. After **A3** is determined and the unit comes to an abnormal stop, the thermostat will remain OFF even if the float switch turns ON again.

If Float Switch is OFF with Thermostat OFF in Cooling Operation

- When the float switch stays OFF for 5 sec., the drain pump turns ON.
- If the float switch remains OFF even after the residual operation of the drain pump has ended, the error code A3 is determined.
- The drain pump turns OFF once residual operation has ended, then turns ON again after 5 seconds.

If Float Switch Turns ON and OFF Continuously, or Float Switch Turns OFF While AF Displayed

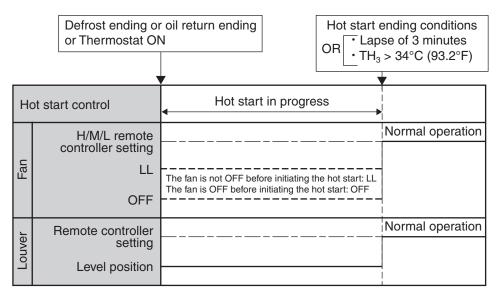

- When the float switch stays OFF for 5 sec., the drain pump turns ON.
- *1. If the float switch continues to turn OFF and ON 5 times consecutively, it is judged as a drain system error and the error code **AF** is determined.
- *2. The drain pump continues to turn ON/OFF in accordance with the float switch ON/OFF even after **AF** is determined.
- *3. While the error code **AF** is displayed, if the float switch remains OFF even after the residual operation of the drain pump has ended, the error code **A3** will be determined.

3.6 Hot Start Control (In Heating Operation Only)

Outline

At startup with thermostat ON or after the completion of defrosting in heating operation, the indoor unit fan is controlled to prevent cold air from blasting out and ensure startup capacity.

Details

R4003653

TH₃: Temperature detected by the indoor heat exchanger thermistor (R3T)

3.7 Other Functions

3.7.1 Signal Receiving Sign

When the indoor unit receives a signal from the remote controller, the unit emits a signal receiving sound.

3.7.2 Auto-restart Function

If a power failure (even a momentary one) occurs during the operation, the system restarts automatically in the same conditions as before when the power supply is restored to the conditions prior to the power failure.

It takes 3 minutes to restart the operation because 3-minute standby function is activated.

3.7.3 Emergency Operation Switch (With BRC082A43)

Outline

When the wireless remote controller does not work due to battery failure or the absence thereof, use the emergency operation switch.

Details

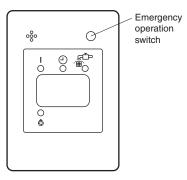

Start

Press emergency operation switch.

- The indoor unit runs in the previous operation mode.
- The system operates with the previously set airflow direction.

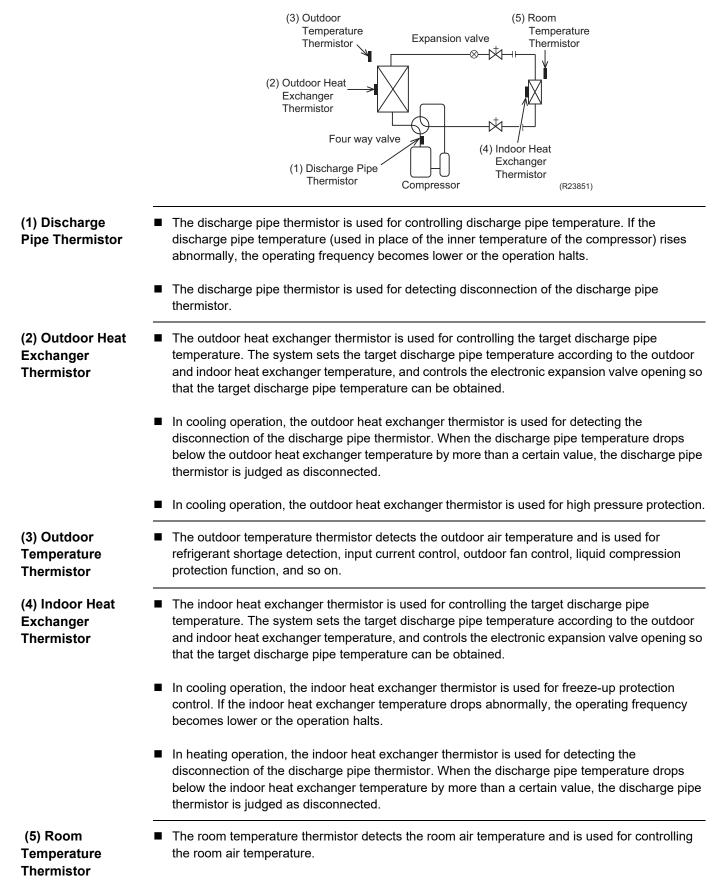

Stop

Press emergency operation switch again.

(R24925)

4. Thermistor Functions

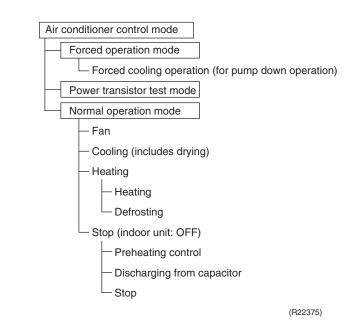

5. Control Specification 5.1 Mode Hierarchy

Outline

The air conditioner control has normal operation mode, forced operation mode, and power transistor test mode for installation and servicing.

Details

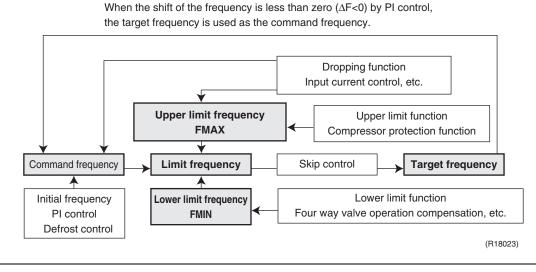

■ Unless specified otherwise, dry operation command is regarded as cooling operation.

5.2 Frequency Control

Outline

The compressor frequency is determined according to the difference between the room thermistor temperature and the target temperature.

Details

1. Determine command frequency

- Command frequency is determined in the following order of priority.
- (1) Limiting defrost control time
- (2) Forced cooling

(3) Indoor frequency command

2. Determine upper limit frequency

The minimum value is set as an upper limit frequency among the frequency upper limits of the following functions:

Compressor protection, input current, discharge pipe temperature, heating peak-cut, freeze-up protection, defrost control.

3. Determine lower limit frequency

The maximum value is set as an lower limit frequency among the frequency lower limits of the following functions:

Four way valve operation compensation, draft prevention, pressure difference upkeep.

4. Determine prohibited frequency

There is a certain prohibited frequency such as a power supply frequency.

Initial Frequency When starting the compressor, the frequency is initialized according to the ΔD value of the indoor unit.

△D signal: Indoor frequency command

The difference between the room thermistor temperature and the target temperature is taken as the ΔD value and is used for ΔD signal of frequency command.

Temperature difference	∆D signal	Temperature difference	∆D signal	Temperature difference	∆D signal	Temperature difference	∆D signal
-2.0°C (-3.6°F)	*OFF	0°C (0°F)	4	2.0°C (3.6°F)	8	4.0°C (7.2°F)	12
–1.5°C (–2.7°F)	1	0.5°C (0.9°F)	5	2.5°C (4.5°F)	9	4.5°C (8.1°F)	13
-1.0°C (-1.8°F)	2	1.0°C (1.8°F)	6	3.0°C (5.4°F)	10	5.0°C (9.0°F)	14
–0.5°C (–0.9°F)	3	1.5°C (2.7°F)	7	3.5°C (6.3°F)	11	5.5°C (9.9°F)	15

* OFF = Thermostat OFF

PI Control

1. P control

The ΔD value is calculated in each sampling time (20 seconds), and the frequency is adjusted according to its difference from the frequency previously calculated.

2. I control

If the operating frequency does not change for more than a certain fixed time, the frequency is adjusted according to the ΔD value.

When ΔD value is low, the frequency is lowered.

When ΔD value is high, the frequency is increased.

3. Frequency control when other controls are functioning

- When frequency is dropping: Frequency control is carried out only when the frequency drops.
- For limiting lower limit: Frequency control is carried out only when the frequency rises.

4. Upper and lower limit of frequency by PI control

The frequency upper and lower limits are set according to the command of the indoor unit. When the indoor or outdoor unit quiet operation command comes from the indoor unit, the upper limit frequency is lower than the usual setting.

5.3 Controls at Mode Changing/Start-up

5.3.1 Preheating Control

Outline

The inverter operation in open phase starts with the conditions of the outdoor temperature, the discharge pipe temperature, the radiation fin temperature and the preheating command from the indoor unit.

Details

09/15 class

Outdoor temperature $\geq -2.5^{\circ}$ C (27.5°F) Control A (preheating for normal state) Outdoor temperature < -2.5° C (27.5°F) Control B (preheating of increased capacity) **Control A**

- ON condition
 Discharge pipe temperature < 0°C (32.0°F)
 Radiation fin temperature < 85°C (185°F)
- OFF condition
 Discharge pipe temperature > 2°C (35.6°F)
 Radiation fin temperature ≥ 90°C (194°F)

Control B

ON condition
 Discharge pipe temperature < 10°C (50.0°F)
 Radiation fin temperature < 85°C (185°F)

■ OFF condition Discharge pipe temperature > 12°C (53.6°F) Radiation fin temperature ≥ 90°C (194°F)

12/18/24 class

ON condition
 Discharge pipe temperature < Outdoor temperature x A + B
 <p>Outdoor temperature < C
 <p>Radiation fin temperature < D</p>

 OFF condition
 Discharge pipe temperature > Outdoor temperature x A + E

Outdoor temperature > **F** Radiation fin temperature ≥ **G**

	•	В	(2	[כ	E	I	F	(3
	~	Б	(°C)	(°F)	(°C)	(°F)	E	(°C)	(°F)	(°C)	(°F)

5.3.2 Four Way Valve Switching

Outline	The four way valve coil is energized/not energized depending on the operation mode. (Heating: ON, Cooling/Dry/Defrost: OFF) In order to eliminate the switching sound as the four way valve coil switches from ON to OFF when the heating is stopped, the OFF delay switch of the four way valve is carried out.
Details	OFF delay switch of four way valve The four way valve coil is energized for 160 seconds after the operation is stopped.

5.3.3 Four Way Valve Operation Compensation

Outline At the beginning of operation as the four way valve is switched, the pressure difference to activate the four way valve is acquired when the output frequency is higher than a certain fixed frequency, for a certain fixed time.

Details

Starting Conditions

- 1. When the compressor starts and the four way valve switches from OFF to ON
- 2. When the four way valve switches from ON to OFF during operation
- 3. When the compressor starts after resetting
- 4. When the compressor starts after the fault of four way valve switching

The lower limit of frequency keeps **A** Hz for **B** seconds for any of the conditions above. When the outdoor temperature is above **C** in heating, the frequency decreases depending on the outdoor temperature.

		09 class		12 class		15 class		18/24 class

5.4 Discharge Pipe Temperature Control

Outline

The discharge pipe temperature is used as the internal temperature of the compressor. If the discharge pipe temperature rises above a certain level, the upper limit of frequency is set to keep the discharge pipe temperature from rising further.

Details

Zone	Control
Stop zone	When the temperature reaches the stop zone, the compressor stops.
Dropping zone	The upper limit of frequency decreases.
Keep zone	The upper limit of frequency is kept.
Up zone	The upper limit of frequency increases.
Reset zone	The upper limit of frequency is canceled.

E	88	190.4	107	224.6	95	203.0	

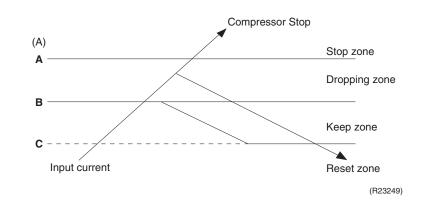

5.5 Input Current Control

Outline

The microcomputer calculates the input current while the compressor is running, and sets the frequency upper limit based on the input current.

In case of heat pump models, this control is the upper limit control of the frequency and takes priority over the lower limit control of four way valve operation compensation.

Details

Frequency control in each zone

Stop zone

After the input current remains in the stop zone for 2.5 seconds, the compressor is stopped.

Dropping zone

- The upper limit of the compressor frequency is defined as operation frequency 2 Hz.
- After this, the output frequency is lowered by 2 Hz every second until it reaches the keep zone.

Keep zone

■ The present maximum frequency goes on.

Reset zone

Limit of the frequency is canceled.

	09 class		12 class		15 class		18/24 class

C (A)	6.5	7.5	10.75	11.25	11	11	15.25	17.25

Limitation of current dropping and stop value according to the outdoor temperature

The current drops when outdoor temperature becomes higher than a certain level (depending on the model).

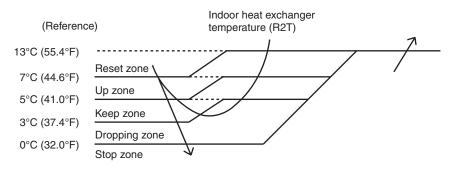

5.6 Freeze-up Protection Control

Outline

During cooling operation, the signal sent from the indoor unit determines the frequency upper limit and prevents freezing of the indoor heat exchanger. The signals from the indoor unit are divided into zones.

Details

The operating frequency limitation is judged with the indoor heat exchanger temperature.

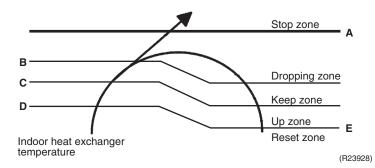

R4003644

5.7 Heating Peak-cut Control

During heating operation, the indoor heat exchanger temperature determines the frequency upper limit to prevent abnormal high pressure.

The operating frequency limitation is judged with the indoor heat exchanger temperature.

Zone	Control
Stop zone	When the temperature reaches the stop zone, the compressor stops.
Dropping zone	The upper limit of frequency decreases.
Keep zone	The upper limit of frequency is kept.
Up zone	The upper limit of frequency increases.
Reset zone	The upper limit of frequency is canceled.

E	45	113.0	44	111.2	46	116.6	

 \star : The valves might drop when the outdoor temperature is low to protect the compressor.

5.8 Outdoor Fan Control

1. Fan ON control to cool down the electrical box

The outdoor fan is turned ON when the electrical box temperature is high while the compressor is OFF.

2. Fan OFF control during defrosting

The outdoor fan is turned OFF while defrosting.

3. Fan OFF delay when stopped

The outdoor fan is turned OFF 60 ~ 70 seconds after the compressor stops.

4. Fan speed control for pressure difference upkeep

The rotation speed of the outdoor fan is controlled for keeping the pressure difference during cooling operation with low outdoor temperature.

- When the pressure difference is low, the rotation speed of the outdoor fan is reduced.
- When the pressure difference is high, the rotation speed of the outdoor fan is controlled as well as normal operation.

5. Fan speed control during forced operation

The outdoor fan is controlled as well as normal operation during forced operation.

Fan speed control during POWERFUL operation The rotation speed of the outdoor fan is increased during POWERFUL operation.

Fan speed control during indoor/outdoor unit quiet operation The rotation speed of the outdoor fan is reduced by the command of the indoor/outdoor unit quiet operation.

Fan ON/OFF control when operation (cooling, heating, dry) starts/stops The outdoor fan is turned ON when the operation starts. The outdoor fan is turned OFF when the operation stops.

5.9 Liquid Compression Protection Function

Outline

The compressor stops according to the outdoor temperature for protection.

DetailsOperation stops depending on the outdoor temperature.
The compressor turns off under the conditions that the system is in cooling operation and the
outdoor temperature is below 0°C (32°F).
However, the operating range can be extended to the lowest temperature of -20°C (-4°F) by
changing facility setting. Refer to page 220 for details of facility setting.

5.10 Defrost Control

Outline

Defrosting is carried out by the cooling cycle (reverse cycle). The defrosting time or outdoor heat exchanger temperature must be more than a certain value to finish defrosting.

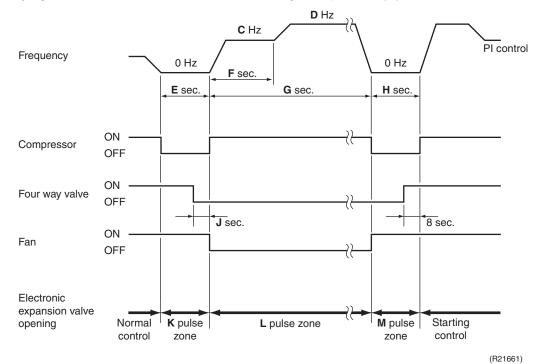

Details

Conditions for Starting Defrost

- The starting conditions are determined with the outdoor temperature and the outdoor heat exchanger temperature.
- The system is in heating operation.
- The compressor operates for 6 minutes.
- More than A minutes (depending on the duration of the previous defrost control) of accumulated time have passed since the start of the operation, or ending the previous defrosting.

Conditions for Canceling Defrost

The judgment is made with the outdoor heat exchanger temperature (**B**).

		09 class	12 class	15 class	18/24 class

5.11 Electronic Expansion Valve Control

Outline

The following items are included in the electronic expansion valve control.

Electronic expansion valve is fully closed

- 1. Electronic expansion valve is fully closed when turning on the power.
- 2. Pressure equalizing control

Open Control

- 1. Electronic expansion valve control when starting operation
- 2. Electronic expansion valve control when the frequency changes
- 3. Electronic expansion valve control for defrosting
- 4. Electronic expansion valve control when the discharge pipe temperature is abnormally high
- 5. Electronic expansion valve control when the discharge pipe thermistor is disconnected

Feedback Control

Target discharge pipe temperature control

Details

The followings are the examples of electronic expansion valve control for each operation mode.

Status	Power on ; Compressor stop	Operation start	Frequency change under starting control	During target discharge pipe temperature control	Frequency change under target discharge pipe temperature control	Discharge pipe thermistor disconnection	Frequency change under discharge pipe thermistor disconnection control	During defrost control

R4003560

5.11.1 Initialization as Power Supply On

The electronic expansion valve is initialized (fully closed) when the power is turned on. Then, the valve opening position is set and the pressure is equalized.

5.11.2 Pressure Equalizing Control

When the compressor is stopped, the pressure equalizing control is activated. The electronic expansion valve opens, and develops the pressure equalization.

5.11.3 Opening Limit Control

The maximum and minimum opening of the electronic expansion valve are limited.

	09/12 class	15 class	18/24 class
Maximum opening (pulse)	470	480	490
Minimum opening (pulse)	32	52	52

The electronic expansion valve is fully closed when cooling operation stops, and is opened at a fixed degree during defrosting.

5.11.4 Starting Operation Control

The electronic expansion valve opening is controlled when the operation starts, thus preventing superheating or liquid compression.

5.11.5 Control when the Frequency Changes

When the target discharge pipe temperature control is active, if the target frequency changes to a specified value in a certain time period, the target discharge pipe temperature control is canceled and the target opening of the electronic expansion value is changed according to the frequency shift.

5.11.6 High Discharge Pipe Temperature Control

When the compressor is operating, if the discharge pipe temperature exceeds a certain value, the electronic expansion value opens and the refrigerant runs to the low pressure side. This procedure lowers the discharge pipe temperature.

5.11.7 Discharge Pipe Thermistor Disconnection Control

Outline	utlineThe disconnection of the discharge pipe thermistor is detected by comparing the discharge temperature with the condensation temperature. If the discharge pipe thermistor is discontected the electronic expansion valve opens according to the outdoor temperature and the open frequency, operates for a specified time, and then stops. After 3 minutes, the operation restarts and checks if the discharge pipe thermistor is discontected, the system stops after operating for a stime. If the disconnection is detected repeatedly, the system is shut down. When the compress 60 minutes without any error, the error counter is reset.					
Details	 Determining thermistor disc When the starting control finish thermistor (A seconds) starts. 1. When the operation mode When the following condition ascertained. 	Heating (When outdoor temperature is below –15°C (5°F))	1200	1800	1800		

When the thermistor is disconnected

When the disconnection is ascertained, the compressor continues operation for 9 minutes and then stops.

If the compressor stops repeatedly, the system is shut down.

5.11.8 Target Discharge Pipe Temperature Control

The target discharge pipe temperature is obtained from the indoor and outdoor heat exchanger temperature, and the electronic expansion valve opening is adjusted so that the actual discharge pipe temperature becomes close to the target discharge pipe temperature. (Indirect SH (superheating) control using the discharge pipe temperature)

The electronic expansion valve opening and the target discharge pipe temperature are adjusted every **A** seconds. The opening degree of the electronic expansion valve is adjusted by the following.

- Target discharge pipe temperature
- Actual discharge pipe temperature
- Previous discharge pipe temperature

	09/12/15 class	18/24 class
A (seconds)	10~30★	20

 \star The time depends on the opening of the electronic expansion valve.

5.12 Malfunctions

5.12.1 Sensor Malfunction Detection

Sensor malfunction can be detected in the following thermistor:

- 1. Outdoor heat exchanger thermistor
- 2. Discharge pipe thermistor
- 3. Radiation fin thermistor
- 4. Outdoor temperature thermistor

5.12.2 Detection of Overcurrent and Overload

Outline

An excessive output current is detected and the OL temperature is observed to protect the compressor.

Details

- If the OL (compressor head) temperature exceeds 120 ~ 130°C (248 ~ 266°F) (depending on the model), the system shuts down the compressor.
- If the inverter current exceeds 12.0 ~ 20.0 A (depending on the model), the system shuts down the compressor.

The upper limit of the current decreases when the outdoor temperature exceeds a certain level.

6. BRC1E73

1. Operation mode selector button

- Press this button to select the operation mode of your preference.
 - * Available modes vary with the indoor unit model.

2. Fan speed control button

- Press this button to select the fan speed of your preference.
- * Available fan speeds vary with the indoor unit model.

3. Menu/OK button

- Used to enter the main menu.
- Used to enter the selected item.

4. Up button ▲

- Used to raise the setpoint.
- The item above the current selection will be highlighted.

(The highlighted items will be scrolled continuously when the button is continuously pressed.)

• Used to change the selected item.

5. Down button ▼

- Used to lower the setpoint.
- The item below the current selection will be highlighted.
 (The highlighted items will be scrolled continuously when the button is continuously pressed.)
- Used to change the selected item.

6. Right button ►

- Used to highlight the next items on the right-hand side.
- Each screen is scrolled in the right-hand direction.

7. Left button ◀

- Used to highlight the next items on the left-hand side.
- Each screen is scrolled in the left-hand direction.

8. On/Off button

- Press this button and system will start.
- Press this button again to stop the system.

9. Operation lamp

- This lamp illuminates solid green during normal operation.
- This lamp flashes if an error occurs.

10. Cancel button

• Used to return to the previous screen.

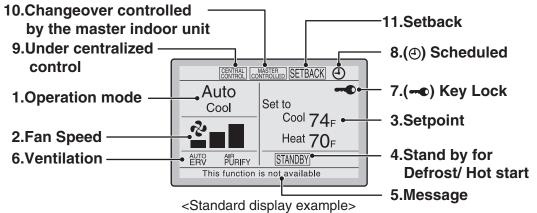

11. LCD (with backlight)

- The backlight will be illuminated for approximately 30 seconds by pressing any button.
- If two remote controllers are used to control a single indoor unit, only the controller accessed first will have backlight functionality.

Liquid Crystal Display

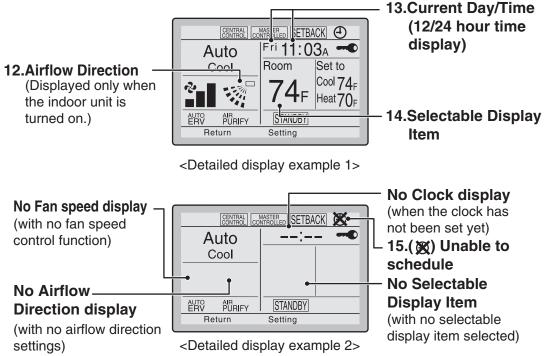

- Three types of display mode (Standard, Detailed and Simple) are available.
- Standard display is set by default.
- Detailed and Simple displays can be selected in the main menu.

Standard display

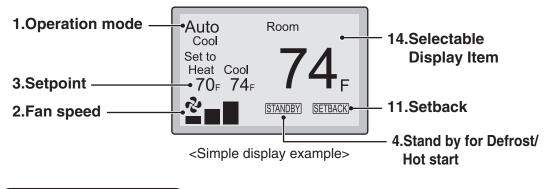

Detailed display

The airflow direction, clock, and selectable item appear on Detailed display screen in addition to the items appearing on Standard display.

Note for all display modes

• Depending on the field settings, while the indoor unit is stopped, OFF may be displayed instead of the operation mode and/or the setpoint may not be displayed.

1. Operation mode

- Used to display the current operation mode: Cool, Heat, Vent, Fan, Dry or Auto.
- In Auto mode, the actual operation mode (Cool or Heat) will be also displayed.
- Operation mode cannot be changed when OFF is displayed. Operation mode can be changed after starting operation.

2. Fan Speed

- Used to display the fan speed that is set for the indoor unit.
- The fan speed will not be displayed if the connected model does not have fan speed control functionality.

3. Setpoint

- Used to display the setpoint for the indoor unit.
- Use the Celsius/Fahrenheit item in the main menu to select the temperature unit (Celsius or Fahrenheit).

4. Stand by for Defrost/Hot start "[STANDBY]"

If ventilation icon is displayed in this field:

 Indicates that an energy recovery ventilator (ERV) is connected.
 For details, refer to the Operation Manual of the ERV.

5. Message

The following messages may be displayed.

"This function is not available"

- Displayed for a few seconds when an Operation button is pressed and the indoor unit does not provide the corresponding function.
- In a remote control group, the message will not appear if at least one of the indoor units provides the corresponding function.

"Error: Push Menu button"

- "Warning: Push Menu button"
- Displayed if an error or warning is detected.
- "Time to clean filter"
- "Time to clean element"
- "Time to clean filter & element"
- Displayed as a reminder when it is time to clean the filter and/or element.

6. Ventilation

- Displayed when an energy recovery ventilator is connected.
- Ventilation Mode icon." AUTO ERV BYPASS " These icons indicate the current ventilation mode (ERV only) (AUTO, ERV, BYPASS).
- Air Purify ICON " ^{AIR} PURIFY" This icon indicates that the air purifying unit (Optional) is in operation.

7. - Key Lock

• Displayed when the key lock is set.

8. ④ Scheduled

• Displayed if the Schedule or Off timer is enabled.

9. Under Centralized control "CENTRAL "

• Displayed if the system is under the management of a multi-zone controller (Optional) and the operation of the system through the remote controller is limited.

10. Changeover controlled by the master indoor unit "CONTROLED " (VRV only)

• Displayed when another indoor unit on the system has the authority to change the operation mode between cool and heat.

11. Setback " SETBACK "

• The setback icon flashes when the unit is turned on by the setback control.

12. Airflow Direction "...""

- Displayed when the airflow direction and swing are set.
- If the connected indoor unit model does not include oscillating louvers this item will not be displayed.

13. Current Day/Time (12/24 hour time display)

- Displayed if the clock is set.
- If the clock is not set, "--:--" will be displayed.
- 12 hour time format is displayed by default.
- Select 12/24 hour time display option in the main menu under "Clock & Calendar".

14. Selectable Display Item

- Room temperature is selected by default.
- For other choices see the operation manual.

15. XUnable to schedule

- Displayed when the clock needs to be set.
- The schedule function will not work unless the clock is set.

1. General Problem Symptoms and Check Items

Symptom	Check Item	Measures	Reference Page
The unit does not	Check the power supply.	Check if the rated voltage is supplied.	—
operate.	Check the type of the indoor unit.	Check if the indoor unit type is compatible with the outdoor unit.	—
	Check the outdoor temperature.	Heating/cooling operations are not available when the outdoor temperature is out of the operation limit. Check the reference page for the operation limit.	239
	Diagnose with remote controller indication.	_	126
	Check the remote controller addresses.	Check if address settings for the remote controller and indoor unit are correct.	210
Operation sometimes stops.	Check the power supply.	A power failure of 2 to 10 cycles stops air conditioner operation. (Operation lamp OFF)	—
	Check the outdoor temperature.	Heating/cooling operations are not available when the outdoor temperature is out of the operation limit. Check the reference page for the operation limit.	239
	Diagnose with remote controller indication.	_	126
The unit operates but does not cool, or does not not not not heat.	Check for wiring and piping errors in the connection between the indoor unit and outdoor unit.	_	_
	Check for thermistor detection errors.	Check if the thermistor is mounted securely.	—
	Check for faulty operation of the electronic expansion valve.	Set the unit to cooling operation, and check the temperature of the liquid pipe to see if the electronic expansion valve works.	_
	Diagnose with remote controller indication.	_	126
	Diagnose by service port pressure and operating current.	Check for refrigerant shortage.	—
Large operating noise and vibrations	Check the output voltage of the power module.	_	197
	Check the power module.	—	
	Check the installation condition.	Check if the required spaces for installation (specified in the installation manual) are provided.	—

2. Troubleshooting with LED 2.1 Indoor Unit

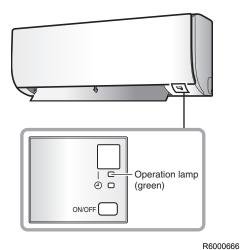

Operation Lamp

The operation lamp blinks when any of the following errors is detected.

- A protection device of the indoor or outdoor unit is activated, or when the thermistor malfunctions.
- A signal transmission error occurs between the indoor and outdoor units.

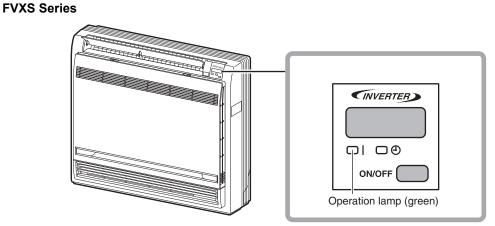

In either case, conduct the diagnostic procedure described in the following pages.

FTX Series

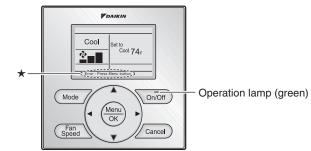

R6000667

FDMQ series with BRC1E73

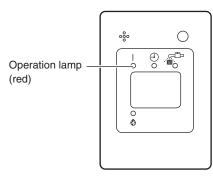

★The error or warning message also blinks on the basic screen.

R4003516

R4003515

FDMQ series with BRC082A43

For wireless remote controller, a receiver is installed. When the error occurs, the operation lamp on the receiver blinks.

R4003517

2.2 Outdoor Unit

The outdoor unit has one green LED (LED A) on the PCB. When the microcomputer works in order, the LED A blinks. However, the LED A turns OFF while the standby electricity saving function is activated and the power supply is OFF.

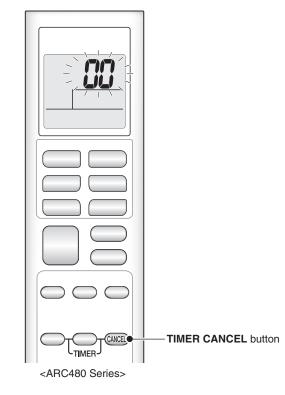

Refer to page 37, 39, 41, 42 for the location of LED A.

3. Service Diagnosis

3.1 ARC480 Series

3.1.1 Method 1

- 1. When **TIMER CANCEL** button is held down for 5 seconds, 22 is displayed on the temperature display screen.
- 2. Press **TIMER CANCEL** button repeatedly until a long beep sounds.

R6000690

Note(s)

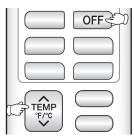

- 1. A short beep or two consecutive beeps indicate non-corresponding codes.
- 2. To return to the normal mode, hold **TIMER CANCEL** button down for 5 seconds. When the remote controller is left untouched for 60 seconds, it also returns to the normal mode.
- 3. Not all the error codes are displayed. When you cannot find the error code, try method 2. Refer to page 115.

No.	Code	No.	Code	No.	Code	No.	Code
1	88	12	жC	23	43	34	83
2	<i>8</i> 5	13	88	24	JS	35	<i>U2</i>

11	<i>X</i> 8	22	٤S	33	PY		

The code indication changes in the sequence shown below.
ARC480A8

3.1.2 Method 2

1. Press the center of **TEMP** button and **OFF** button at the same time.

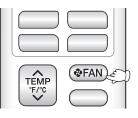

R6000668

 $\ensuremath{\mathbb{S}}\xspace$ is displayed on the LCD.

- 2. Select ${\rm SC}$ (service check) with TEMP \checkmark or TEMP \checkmark button.
- 3. Press FAN button to enter the service check mode.

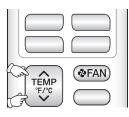

CC is displayed and the left-side number blinks.

R6000696

R6000670

4. Press **TEMP** ∧ or **TEMP** ∨ button and change the number until you hear the two consecutive beeps or the long beep.

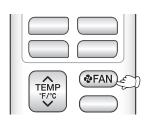

- 5. Diagnose by the sound.
 - Beep: The left-side number does not correspond with the error code.
 - Two consecutive beeps: The left-side number corresponds with the error code but the right-side number does not.

R6000669

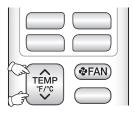

R6000695

- Long beep: Both the left-side and right-side numbers correspond with the error code. The numbers indicated when you hear the long beep are the error code. Refer to page 126.
- 6. Press FAN button.

The right-side number blinks.

7. Press **TEMP** \land or **TEMP** \checkmark button and change the number until you hear the long beep.

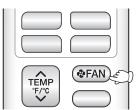

- 8. Diagnose by the sound.
 - Beep: The left-side number does not correspond with the error code.
 - Two consecutive beeps: The left-side number corresponds with the error code but the right-side number does not.
 - Long beep: Both the left-side and right-side numbers correspond with the error code.

9. Determine the error code.

The numbers indicated when you hear the long beep are the error code. Refer to page 126.

10. Press **FAN** button for 5 seconds to exit from the service check mode.

When the remote controller is left untouched for 60 seconds, it returns to the normal mode also.

R6000669

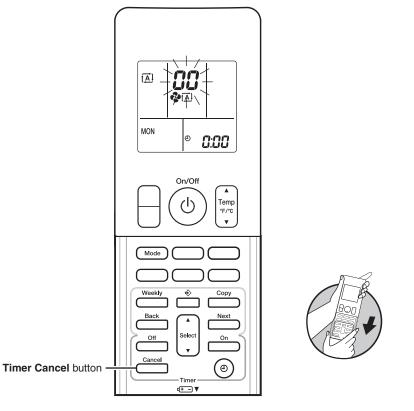

R6000669

R6000670

3.2 ARC466 Series

3.2.1 Method 1

- 1. When **Timer Cancel** button is held down for 5 seconds, 22 is displayed on the temperature display screen.
- 2. Press Timer Cancel button repeatedly until a long beep sounds.

< ARC466 Series >

(R24045)

Note(s)

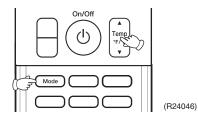

- 1. A short beep or two consecutive beeps indicate non-corresponding codes.
 - 2. To return to the normal mode, hold **Timer Cancel** button down for 5 seconds. When the remote controller is left untouched for 60 seconds, it also returns to the normal mode.
 - 3. Not all the error codes are displayed. When you cannot find the error code, try method 2. Refer to page 118.

■ The code indication changes in the sequence shown below. **ARC466A21, A37**

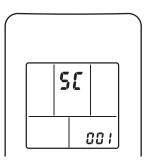

No.	Code	No.	Code	No.	Code	No.	Code
1	88	11	XS	21	٤S	31	<i>U2</i>

9	UN	19	63	29	рч		
10	88	20	64	30	Жſ		

3.2.2 Method 2

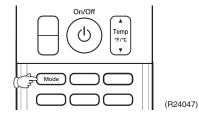

1. Press the center of **Temp** button and **Mode** button at the same time.

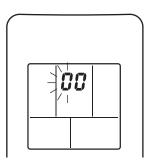

SE is displayed on the LCD.

- 2. Select SE (service check) with **Temp** \blacktriangle or **Temp** \blacktriangledown button.
- 3. Press **Mode** button to enter the service check mode.

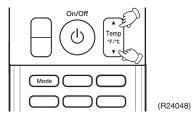

The left-side number blinks.

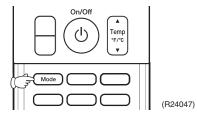

R6000373

4. Press **Temp** ▲ or **Temp** ▼ button and change the number until you hear the two consecutive beeps or the long beep.

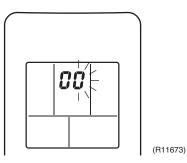

- 5. Diagnose by the sound.
 - Beep: The left-side number does not correspond with the error code.
 - Two consecutive beeps: The left-side number corresponds with the error code but the right-side number does not.

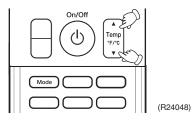

- Long beep: Both the left-side and right-side numbers correspond with the error code. The numbers indicated when you hear the long beep are the error code. Refer to page 126.
- 6. Press Mode button.

The right-side number blinks.

7. Press **Temp** \blacktriangle or **Temp** \blacktriangledown button and change the number until you hear the long beep.

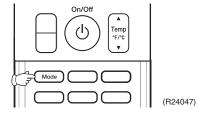

- 8. Diagnose by the sound.
 - Beep: The left-side number does not correspond with the error code.
 - Two consecutive beeps: The left-side number corresponds with the error code but the right-side number does not.
 - Long beep: Both the left-side and right-side numbers correspond with the error code.

9. Determine the error code.

The numbers indicated when you hear the long beep are the error code. Refer to page 126.

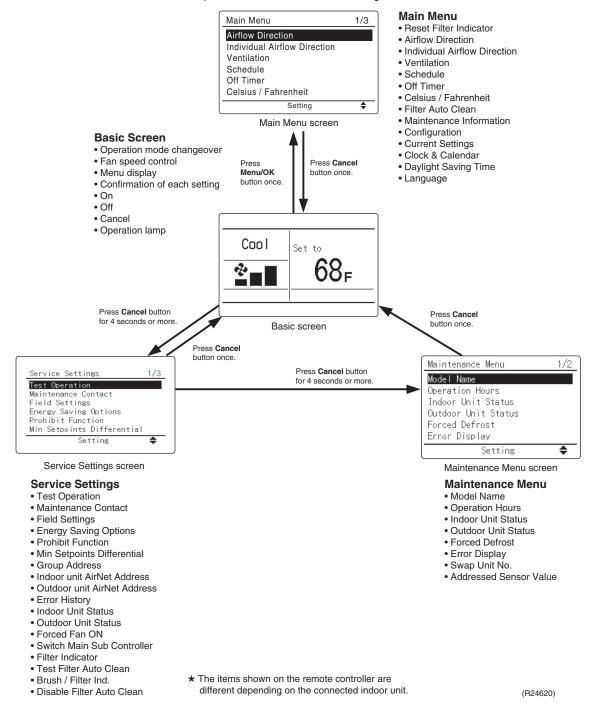

- 10. Press **Mode** button for 5 seconds to exit from the service check mode.
 - When the remote controller is left untouched for 60 seconds, it returns to the normal mode also.

3.3 BRC1E73

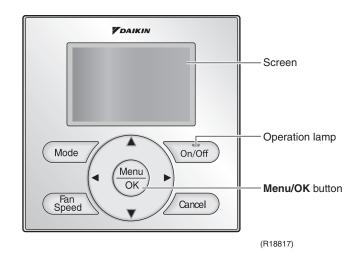

Relations Between Modes On power-up, the message "**Checking the connection. Please standby**." will be displayed on the remote controller screen temporarily and then the basic screen will be displayed. To access a mode from the basic screen, refer to the figure below.

When any of the operation buttons is pressed, the backlight will come on and remain lit for about 30 seconds. Be sure to press a button while the backlight is on.

ServiceThe following message is displayed on the screen when an error (or a warning) occurs during
operation.

Check the error code and take the corrective action specified for the particular model.

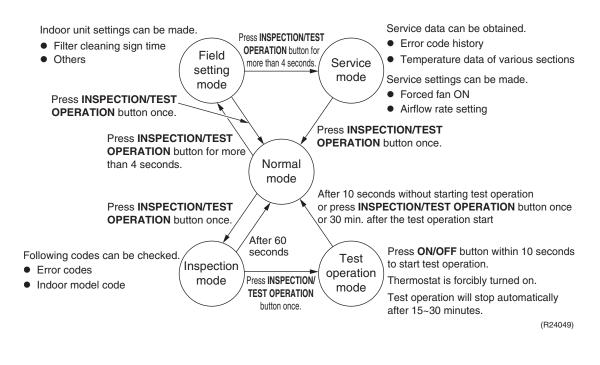

Operation

Cool Set to 74 _F Cool Set to 74 _F	 If an error occurs, either one of the following items will flash in the basic screen. Error: Push Menu button * The Operation lamp will flash. * For Simple display, the message is not displayed, and only the Operation lamp flashes. 	
	 Warning: Push Menu button * The Operation lamp will not flash. * For Simple display, the message is not displayed, and the Operation lamp does not flash, either. Press Menu/OK button. 	Operation lamp
2	 The error code will flash and the service contact and model name or code may be displayed. Notify your Daikin dealer of the Error code and model name or code. 	

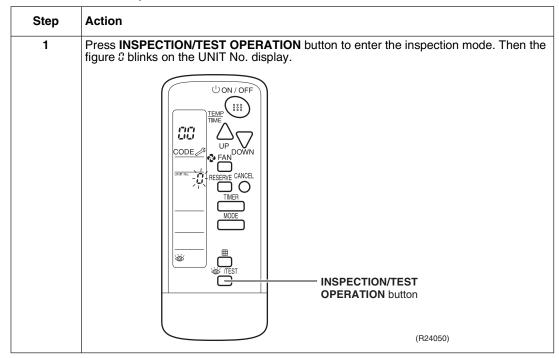

3.4 BRC082A43

Relations Between Modes The following modes can be selected by using **INSPECTION/TEST OPERATION** button on the remote controller.

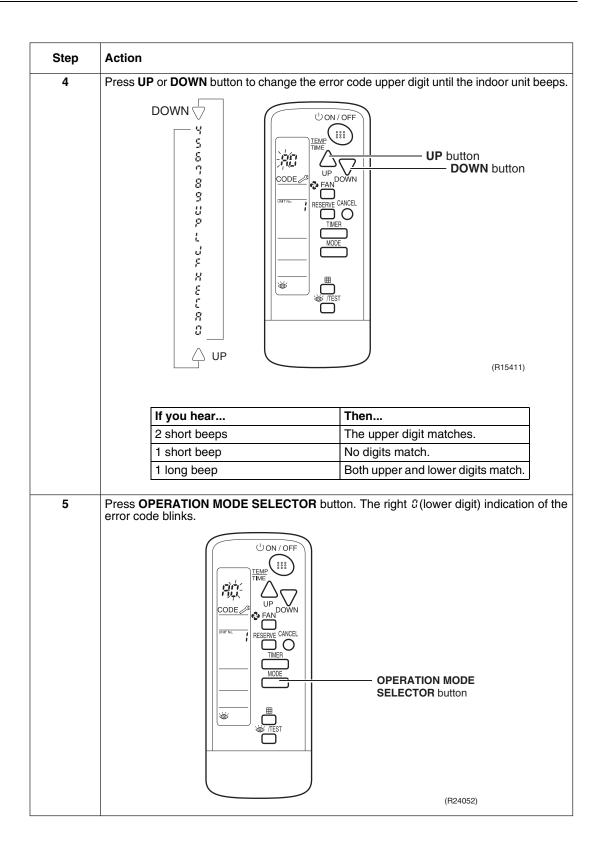

Service Diagnosis

To find the error code, proceed as follows:

Step	Action				
2	Press UP or DOWN button and change the

Error Code	8F	
Method of Error Detection	Water leakage from humidifier(s) is detected based on the float sw the system is not operating.	itch ON/OFF changeover while
Error Decision Conditions	The float switch changes from ON to OFF while the system is OFF	
Supposed Causes	 Defective float switch Error in water drain system of humidifier(s) Clogged electric expansion value in humidifier(s) Defective indoor unit PCB 	
Troubleshooting	Caution Be sure to turn off the power switch before connecting connectors, or parts may be damaged. Humidifier(s) NO v YES VES Is the water drain system of the humidifier normal? NO YES VES	 The float switch may be defective. Check if the drain-up height and the horizontal pipe length exceed the specifications. Clogged water drain system, clogged drain pump, or faulty float switch Replace the indoor unit PCB (control PCB). (R24055)

The system continues to operate with the thermostat OFF even while the error code is displayed.

6.6 Thermistor or Related Abnormality

	y
Error Code	EY, ES, ES
Method of Error Detection	The temperatures detected by the thermistors determine thermistor errors.
Error Decision Conditions	The thermistor is disconnected or shorted while the unit is running.
Supposed Causes	 Disconnection of connector Defective thermistor(s) Breaking of wires Defective indoor unit PCB
	If the cause of the problem is related to the thermistors, the thermistors should be checked prior to changing the indoor unit PCB. To check the thermistors, proceed as follows: 1. Disconnect the thermistor from the indoor unit PCB. 2. Read the temperature and the resistance value. 3. Check if the measured values correspond with the values in the table of thermistor resistance check.
C Reference	Check No.01 Refer to P.184

6.7 Remote Controller Thermistor Abnormality

Error Code	[]
Method of Error Detection	Even if remote controller thermistor is faulty, system is possible to operate by system thermistor. Malfunction detection is carried out by the temperature detected by the remote controller thermistor.
Error Decision Conditions	The remote controller thermistor is disconnected or shorted while the unit is running.
Supposed Causes	 Defective room temperature thermistor in the wired remote controller Defective wired remote controller PCB External factor such as noise
Troubleshooting	Image: Notify the second of error codes. (Refer to Note) Image: State of the remote controller again? VES

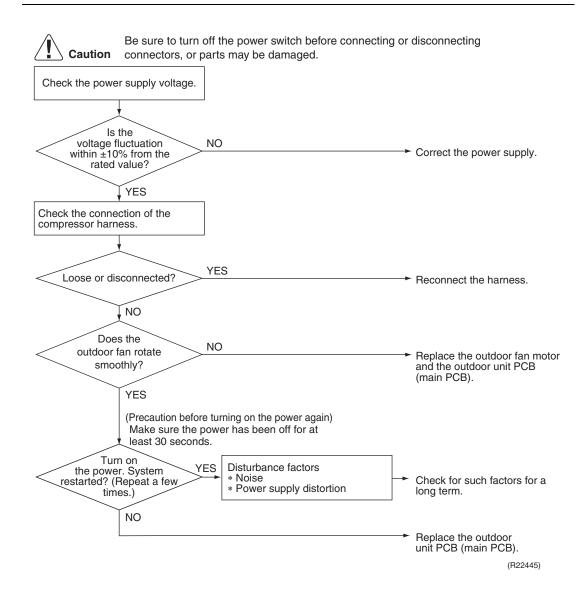

To delete the record of error codes, press **ON/OFF** button on the remote controller for 4 seconds or more while the error code is displayed in the inspection mode.

6.8 Low-voltage Detection or Over-voltage Detection

Error Code	U2
Method of Error Detection	Low-voltage detection: An abnormal voltage drop is detected by the DC voltage detection circuit.
	Over-voltage detection: An abnormal voltage rise is detected by the over-voltage detection circuit.
Error Decision Conditions	 Low-voltage detection: The voltage detected by the DC voltage detection circuit is below 150 ~ 200 V (depending on the model). The compressor stops if the error occurs, and restarts automatically after 3-minute standby.
	 Over-voltage detection: An over-voltage signal is fed from the over-voltage detection circuit to the microcomputer (over 458 ~ 500 V, depending on the model). The compressor stops if the error occurs, and restarts automatically after 3-minute standby.
Supposed Causes	 Power supply voltage out of specification Defective DC voltage detection circuit Defective over-voltage detection circuit Defective PAM control part Disconnection of compressor harness Short circuit inside the fan motor winding Noise Momentary drop of voltage Momentary power failure Defective outdoor unit PCB

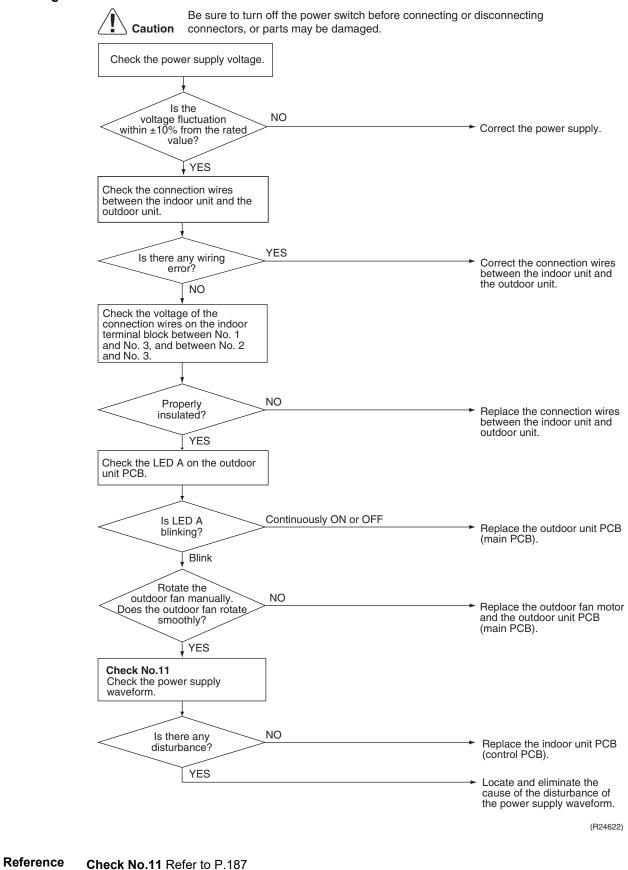

Troubleshooting

6.9 Signal Transmission Error (Between Indoor and Outdoor Unit)

Error Code	UN
Method of Error Detection	The signal transmission data from the outdoor unit is checked whether it is normal.
Error Decision Conditions	The data sent from the outdoor unit cannot be received normally, or the content of the data is abnormal.
Supposed Causes	 Power supply voltage out of specification Reduction of power supply voltage Wiring error Breaking of the connection wires between the indoor and outdoor units (wire No. 3) Defective outdoor unit PCB Short circuit inside the fan motor winding Defective indoor unit PCB Disturbed power supply waveform

Troubleshooting

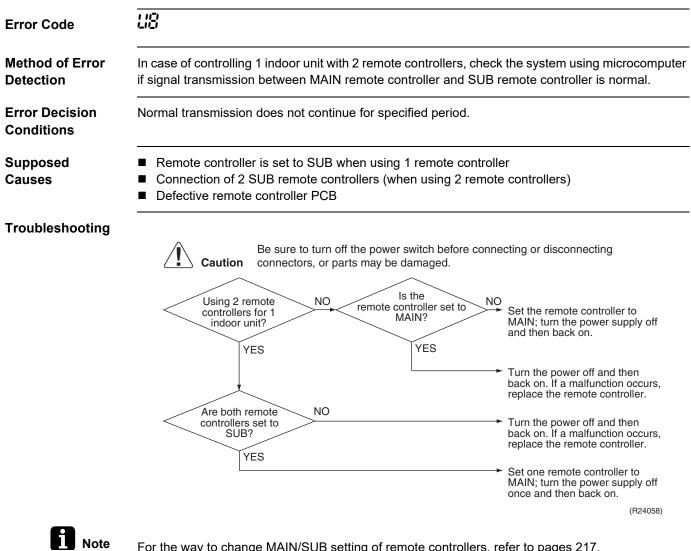

6.10 Signal Transmission Error (Between Indoor Unit and Remote Controller)

Error Code	
Method of Error Detection	In case of controlling 1 indoor unit with 2 remote controllers, check the system using microcompo if signal transmission between indoor unit and remote controller (main and sub) is normal.
Error Decision Conditions	Normal transmission does not continue for specified period.
Supposed Causes	 Connection of 2 main remote controllers (when using 2 remote controllers) Defective indoor unit PCB Defective remote controller Transmission error caused by noise
Troubleshooting	
	Be sure to turn off the power switch before connecting or disconnecting connectors, or parts may be damaged. Using 2 remote controllers for 1 indoor unit? NO NO NO NO NO NO NO NO NO NO
	Return to normal? NO Replace the indoor unit PCB. There is possibility of malfunction caused by noise. Check the surrounding area and turn on again.

7.15 Output Overcurrent Detection

- Error Code	LS	
Method of Error Detection	An output overcurrent is detected by checking the current that flows in the inverter DC section.	
Error Decision Conditions	 A position signal error occurs while the compressor is running. A rotation speed error occurs while the compressor is running. An output overcurrent signal is fed from the output overcurrent detection circuit to the microcomputer. If the error repeats, the system is shut down. Reset condition: Continuous run for about 11 minutes without any other error 	
Supposed Causes	 Poor installation condition Closed stop valve Defective power module Wrong internal wiring Abnormal power supply voltage Defective outdoor unit PCB Power supply voltage out of specification Defective compressor 	
Troubleshooting	Image: Section of the power switch before connecting or disconnecting connecting connectors, or parts may be damaged. The output overcurrent may result from wrong internal wiring. If the system is interrupted by an output grading again. Check No. 17 Check No. 17 Check number of the power supply voltage, discharge and suction pressures, an other factors for a long term. Furn off the power and disconnection of power supply voltage, discharge and suction pressures, and other factors for a long term. Monitor the power supply voltage, discharge and suction pressures, and other factors for a long term. Not a malfunction. Key Not a ma

7.16 Signal Transmission Error on Outdoor Unit PCB

Error Code		
Method of Error Detection	Communication error between microcomputer mounted on the main PCB and PM1.	
Error Decision Conditions	 The abnormality is determined when the data sent from the PM1 cannot be received for 9 seconds. The error counter is reset when the data from the PM1 can be successfully received. 	
Supposed Causes	Defective outdoor unit PCB	
Troubleshooting	Image: Note that the system is a start of the power switch before connecting or disconnecting connecting connectors, or parts may be damaged. Image: Turn off the power. Then, turn on the power to restart the system. Image: Turn off the power. Then, turn on the power to restart the system. Image: Turn off the power. Then, turn on the power to restart the system. 8. Check8.1 Thermistor Resistance Check

Check No.01

Measure the resistance of each thermistor using multimeter.

The resistance values are defined by below table.

If the measured resistance value does not match the listed value, the thermistor must be replaced.

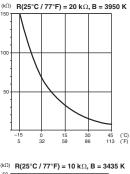

- Disconnect the connector of thermistor ASSY from the PCB to measure the resistance between the pins using multimeter.
- To check the thermistor soldered on a PCB, disconnect the PCB from other PCB/parts, and measure the resistance between the both ends of soldered thermistor.

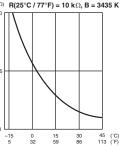

Thermistor ASSY

	mistor erature	Туре А	Туре В	
°C	°F	R(25°C / 77°F) = 20 kΩ B = 3950 K	R(25°C / 77°F) = 10 kΩ B = 3435 K	
-20	-4	197.8	73.4	
-15	5	148.2	57.0	
-10	14	112.1	44.7	
-5	23	85.60	35.3	
0	32	65.93	28.2	
5	41	51.14	22.6	
10	50	39.99	18.3	
15	59	31.52	14.8	
20	68	25.02	12.1	
25	77	20.00	10.0	
30	86	16.10	8.2	
35	95	13.04	6.9	
40	104	10.62	5.8	
45	113	8.707	4.9	
50	122	7.176	4.1

Outdoor	R1T	Outdoor air temperature thermistor	А	А	А
Unit	R2T	Outdoor heat exchanger thermistor	A	A	A
	R3T	Discharge pipe thermistor	А	A	А

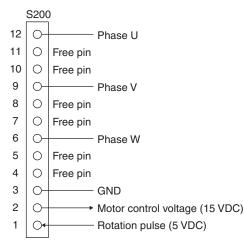

When replacing the defective thermistor(s), replace the thermistor as ASSY.

8.2 Indoor Fan Motor Connector Check

Check No.03 FTX09/12/15NMVJU

- Fan motor wire breakdown/short circuit check
 - (1) Check the connector for connection.
 - (2) Turn the power off.
 - (3) Check if each resistance at the phases U V and V W is within specified range in the table below.
- Motor control voltage check
 - (1) Check the connector for connection.
 - (2) Check the motor control voltage is generated (between the pins 2 3).
- Rotation pulse check
 - (1) Check the connector for connection.
 - (2) Turn the power on and stop the operation.
 - (3) Check if the Hall IC generates the rotation pulse 4 times when the fan motor is manually rotated once (between the pins 1 3).

R6000090

	U-V/V-W Resistance (Ω)
FTX09/12NMVJU	67.0 ~ 85.1
FTX15NMVJU	39.6 ~ 50.3

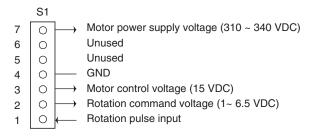

A measurement error might occur in the resistance value depending on the measurement conditions and the method.

Check No.02

FTX18/24UVJU, FVXS Series

- 1. Check the connection of connector.
- 2. Check motor power supply voltage output (pins 4 7).
- 3. Check motor control voltage (pins 4 3).
- 4. Check rotation command voltage output (pins 4 2).
- 5. Check rotation pulse input (pins 4 1).

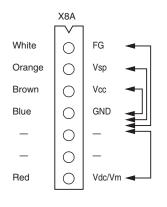

R6000681

FDMQ Series

- 1. Turn the power supply OFF.
- 2. With the fan motor connector disconnected, measure the resistance between each pin, then make sure that the resistance is more than the value mentioned in the following table.

Measuring points	Judgement
White - Blue	1 MΩ or more
Orange - Blue	100 kΩ or more
Brown - Blue	100 Ω or more
Red - Blue	100 kΩ or more

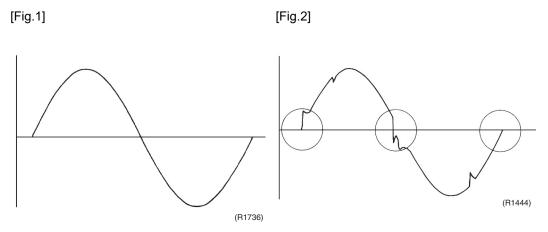

(R25080)

8.3 Power Supply Waveform Check

Check No.11

Measure the power supply waveform between No. 1 and No. 2 on the terminal strip, and check the waveform disturbance.

- Check if the power supply waveform is a sine wave (Fig.1).
- Check if there is waveform disturbance near the zero-cross (sections circled in Fig.2).

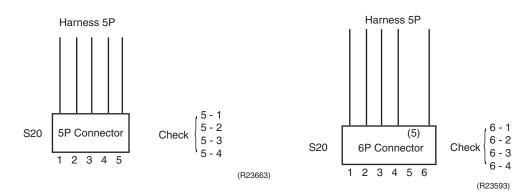

8.4 Electronic Expansion Valve Check

Check No.12

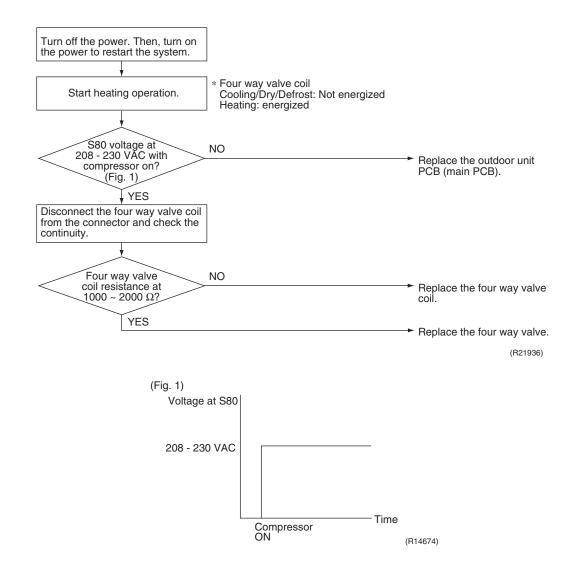

Conduct the following to check the electronic expansion valve (EV).

- 1. Check if the EV connector is correctly connected to the PCB.
- 2. Turn the power off and on again, and check if the EV generates a latching sound.
- 3. If the EV does not generate a latching sound in step 2, disconnect the connector and check the continuity using a multimeter.
- 4. Check the continuity between the pins 5 1, 5 2, 5 3, 5 4 (between the pins 6 1, 6 2, 6 3, and 6 4 for the 6P connector models). If there is no continuity between the pins, the EV coil is faulty.
- 5. If the continuity is confirmed in step 3, the outdoor unit PCB (main PCB) is faulty.

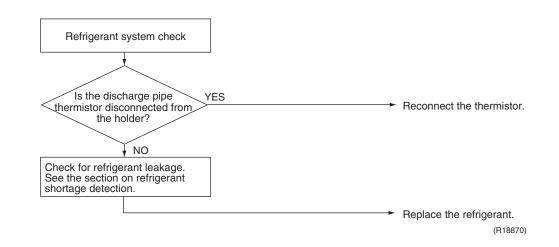

8.5 Four Way Valve Performance Check

Check No.13

8.6 Inverter Unit Refrigerant System Check

Check No.14

8.7 Inverter Analyzer Check

Check No.15

Characteristics

Inverter analyzer: RSUK0917C

If an abnormal stop occurs due to compressor startup failure or overcurrent output when using an inverter unit, it is difficult to judge whether the stop is caused by the compressor failure or some other failure (main PCB, power module, etc.). The inverter analyzer makes it possible to judge the cause of trouble easily and securely. Connect an inverter analyzer as a quasi-compressor instead of compressor and check the output of the inverter.

Operation Method

Step 1

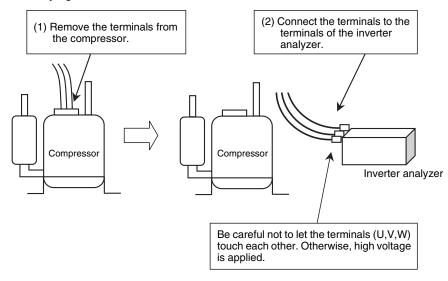

Be sure to turn the power off.

Step 2

Install an inverter analyzer instead of a compressor.

Note:

Make sure the charged voltage of the built-in smoothing electrolytic capacitor drops to 10 VDC or below before carrying out the service work.

R6000682

Reference:

If the terminals of the compressor are not FASTON terminals (difficult to remove the wire on the terminals), it is possible to connect wires available on site to the outdoor unit from output side of PCB. Do not connect them to the compressor at the same time, otherwise it may result in incorrect detection.

Step 3

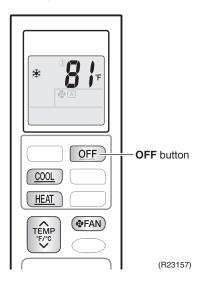

Activate the power transistor test operation from the outdoor unit.

Power transistor test operation can be activated only once after turning on the power supply. If reactivation of the power supply transistor operation is needed, turn the power supply off and then on again.

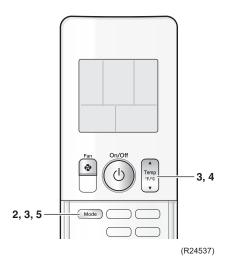

FTX09/12/15NMVJU

- 1. Turn the power on.
- 2. Press the center of TEMP button and OFF button on the remote controller at the same time.
- 3. Select ? with **TEMP** or **TEMP** button.
- 4. Press FAN button.
- 5. Press FAN ONLY button to start the power transistor test operation.

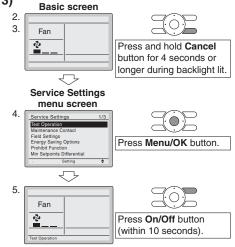

FTX18/24UVJU, FVXS series

- 1. Turn the power on.
- 2. Select FAN operation with the Mode button on the remote controller.
- 3. Press the center of the **Temp** button and the **Mode** button at the same time.
- 4. Select ?⁻ with the **Temp**▲ or **Temp**▼ button.
- 5. Press the Mode button to start the power transistor test operation.

FDMQ series with Wired Remote Controller (BRC1E73)

- 1. Turn the power on.
- 2. Set FAN operation using the remote controller.
- Press and hold Cancel button for 4 seconds or longer.
- 4. Select Test Operation in the service settings menu, then press Menu/OK button.
 → Basic screen returns and "Test Operation" is displayed at the bottom.
- 5. Press On/Off button within 10 seconds.
 → 3 minutes after pressing On/Off button, power transistor test operation will start.
- Test operation will stop automatically after about 30 minutes.
 To stop the operation, press On/Off button.

FDMQ series with Wireless Remote Controller (BRC082A43)

- 1. Turn the power on.
- 2. Press $\stackrel{\text{MODE}}{=}$ and select FAN operation.
- 3. Press twice. "TEST" is displayed.
- 4. Press within 10 seconds.
 - \rightarrow 3 minutes after pressing (1), power transistor test operation will start.
- Test operation will stop automatically after about 30 minutes.

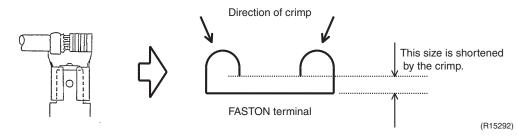

To stop the operation, press

Diagnose method (Diagnose according to 6 LEDs lighting status.)

- If all the LEDs are lit uniformly, the compressor is defective.
 → Replace the compressor.
- 2. If the LEDs are not lit uniformly, check the power module. \rightarrow Refer to **Check No.22**.
- If NG in Check No.22, replace the power module. (Replace the main PCB. The power module (IPM1) is united with the main PCB.) If OK in Check No.22, check if there is any solder cracking on the PCB.
- 4. If any solder cracking is found, replace the PCB or repair the soldered section. If there is no solder cracking, replace the PCB.

- 1. When the output frequency is low, the LEDs blink slowly. As the output frequency increases, the LEDs blink quicker. (The LEDs look like they are lit.)
- 2. On completion of the inverter analyzer diagnosis, be sure to re-crimp the FASTON terminals. Otherwise, the terminals may be burned due to loosening.

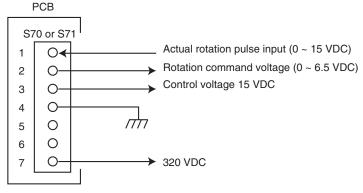

8.8 Rotation Pulse Check on the Outdoor Unit PCB

Check No.16

Make sure that the voltage is within 320 $^{+100}_{-50}$ VDC.

- 1. Set operation off and power off. Disconnect the connector S70 or S71.
- 2. Check that the voltage between the pins 4 7 is 320 VDC.
- 3. Check that the control voltage between the pins 4 3 is 15 VDC.
- 4. Check that the rotation command voltage between the pins 4 2 is 0 ~ 6.5 VDC.
- 5. Keep operation off and power off. Connect the connector S70 or S71.
- Check whether 4 rotation pulses (0 ~ 15 VDC) are input at the pins 4 1 when the fan motor is rotated 1 turn by hand.

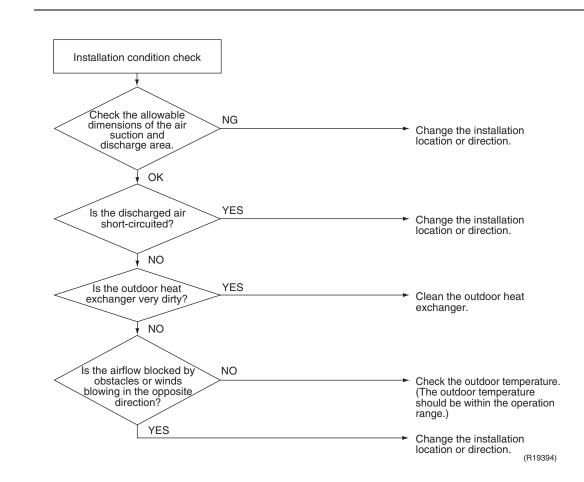

When the fuse is melted, check the outdoor fan motor for proper function. If NG in step 2 \rightarrow Defective PCB \rightarrow Replace the outdoor unit PCB (main PCB). If NG in step 4 \rightarrow Defective Hall IC \rightarrow Replace the outdoor fan motor. If OK in both steps 2 and 4 \rightarrow Replace the outdoor unit PCB (main PCB).

(R20507)

Check No.17

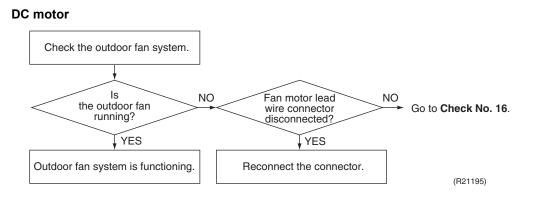

8.10 Discharge Pressure Check

Check No.18

8.11 Outdoor Fan System Check

Check No.19

8.12 Main Circuit Short Check

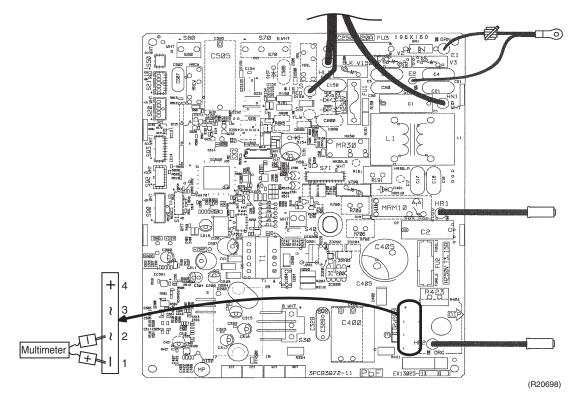

Check No.20

Check to make sure that the voltage between (+) and (–) of the diode bridge (DB1) is about 0 V before checking

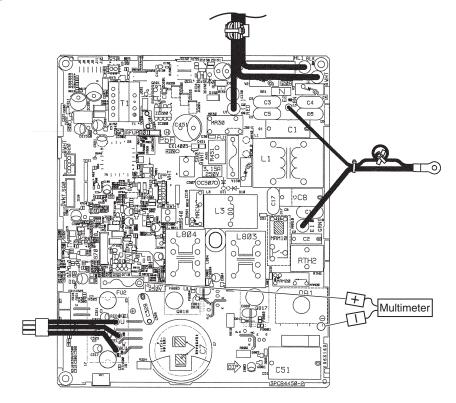

- Measure the resistance between the pins of the DB1 referring to the table below.
- If the resistance is ∞ or less than 1 k Ω , short circuit occurs on the main circuit.

Positive terminal (+) of digital multimeter	~ (2, 3)	+ (4)	~ (2, 3)	- (1)	
Negative terminal (–) of digital multimeter	+ (4)	~ (2, 3)	- (1)	~ (2, 3)	
Resistance is OK.	several k Ω ~ several M Ω				
Resistance is NG.	0 Ω or ∞				

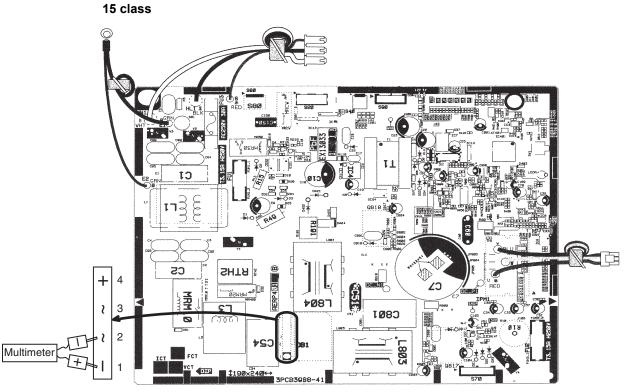

09 class

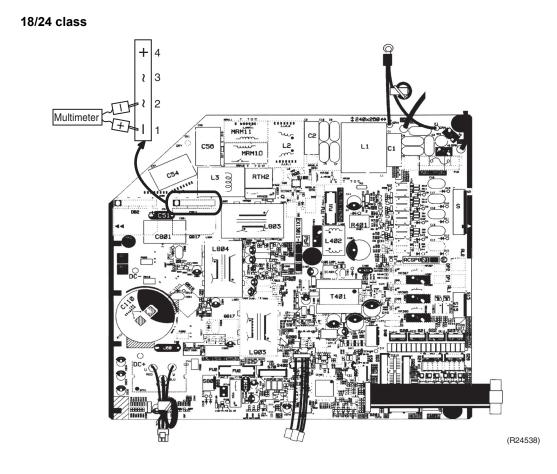

12 class

(R23024)

(R25105)

8.13 Power Module Check

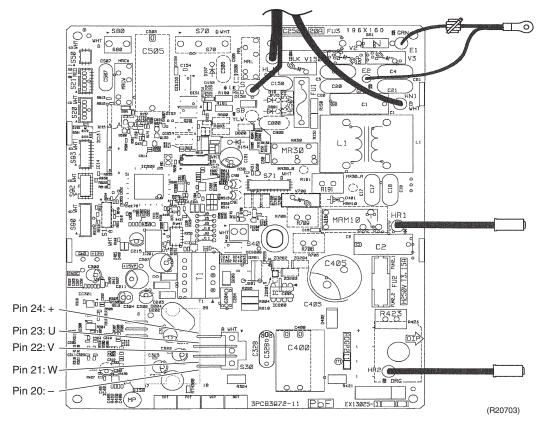

Check No.22

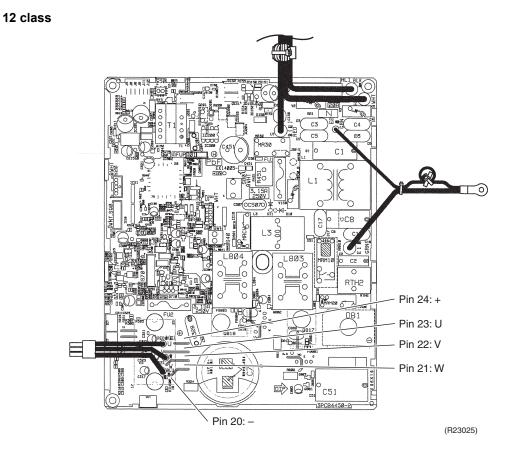

Check to make sure that the voltage between (+) and (–) of the power module is about 0 V before checking.

- Disconnect the compressor harness connector from the outdoor unit PCB. To disengage the connector, press the protrusion on the connector.
- Follow the procedure below to measure resistance between the terminals of the power module and the terminals of the compressor with a multimeter. Evaluate the measurement results referring to the following table.

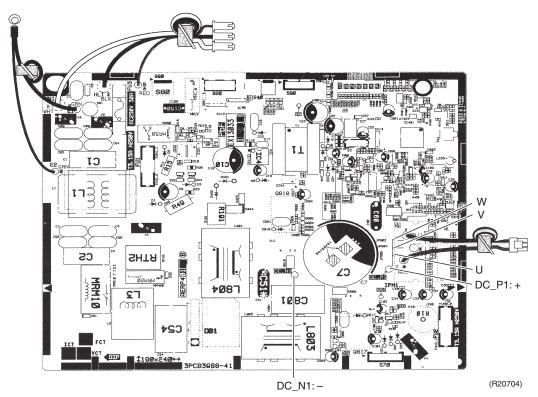

Positive terminal (+) of digital multimeter	Power module (+)	UVW	Power module (–)	UVW
Negative terminal (–) of digital multimeter	UVW	Power module (+)	UVW	Power module (–)
Resistance is OK.		several k Ω ~ several M Ω		
Resistance is NG.	0 Ω or ∞

1. Pump Down Operation

Outline

In order to protect the environment, be sure to conduct pump down operation when relocating or disposing of the unit.

Details

- 1. Remove the valve caps from the liquid stop valve and the gas stop valve.
- 2. Carry out forced cooling operation.
- 3. After 5 to 10 minutes, close the liquid stop valve with a hexagonal wrench.
- 4. After 2 to 3 minutes, close the gas stop valve and stop the forced cooling operation.

Reference

Refer to Forced Cooling Operation on page 202 for details.

2. Forced Cooling Operation

Outline

The forced cooling operation is allowed when both the following conditions are met.

- 1. The outdoor unit is not abnormal and not in the 3-minute standby mode.
- 2. The outdoor unit is not operating.

Protection functions have priority over all other functions during forced cooling operation.

- 1. Press center of **TEMP** button and **OFF** button at the same time.
- 2. Press **Temp** button, select "?", and press **FAN** button.
- 3. Press COOL button to turn on the system.
 - Forced cooling operation will stop automatically after about 30 minutes. To stop the operation, press **OFF** button.

R7000274

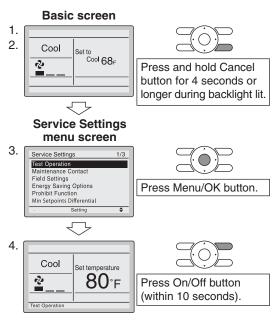

FTX18/24UVJU, FVXS Series

- 1. Press Mode button and select the COOL operation.
- 2. Press On/Off button to turn on the system.
- 3. Press **Temp**▲, ▼ buttons and **Mode** button at the same time.
- Press Temp▲, ▼ buttons, select "?", and press Mode button for confirmation. Forced cooling operation will stop automatically after about 30 minutes. To stop the operation, press OFF button.

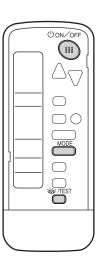

For FDMQ series

- FDMQ Series with Wired Remote Controller (BRC1E73)
- 1. Set to COOL operation using the remote controller.
- Press and hold Cancel button for 4 seconds 2. or longer. Service settings menu is displayed.
- 3. Select **Test Operation** in the service settings menu, and press **Menu/OK** button. Basic screen returns and "Test Operation" is displayed at the bottom.
- 4. Press **On/Off** button within 10 seconds, and the forced cooling operation starts.
- Forced cooling operation will stop automatically after about 15 minutes. To stop the operation, press **On/Off** button.

FDMQ Series with Wireless Remote Controller (BRC082A43)

- Press button and select the COOL operation.
- Press button twice. "TEST" is displayed.
- 3. Press button within 10 seconds, and the forced cooling operation starts.
- Forced cooling operation will stop automatically after about 15 minutes. To stop the operation, press ^{Oon/orr} button.

3. Trial Operation

Outline

Carry out the trial operation in accordance with the operation manual to ensure that all functions and parts, such as flap movement, are working properly.

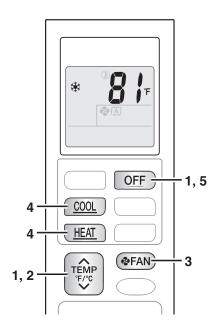

Trial operation should be carried out in either cooling or heating operation.

Procedure

- 1. Measure the power supply voltage and make sure that it falls within the specified range.
- In cooling operation, select the lowest programmable temperature (18°C (64°F)); in heating operation, select the highest programmable temperature (30°C (86°F)).
 - Trial operation may be disabled in either operation mode depending on the room temperature.
 - After trial operation is complete, set the temperature to a normal level (26 ~ 28°C (78 ~ 82°F) in cooling, 20 ~ 24°C (68 ~ 75°F) in heating).
 - For protection, the system does not start for 3 minutes after it is turned off.

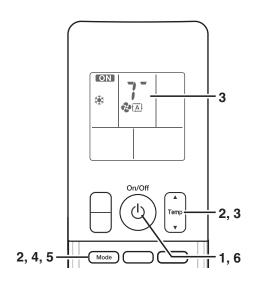

ARC480 Series

- 1. Press the center of **TEMP** button and **OFF** button on the remote controller at the same time.
- 2. Select 7 (trial operation) with **Temp** \wedge , or \checkmark button.
- 3. Press **FAN** button to enter the trial operation mode.
- 4. Press COOL or HEAT button to start trial operation.
- 5. Trial operation terminates in about 30 minutes and switches into normal mode. To quit trial operation, press **OFF** button.

ARC466 Series

- 1. Press **On/Off** button to turn on the system.
- 2. Press the center of **Temp** button and **Mode** button at the same time.
- 3. Select ? (trial operation) with **Temp** \blacktriangle or **Temp** \blacktriangledown button.
- 4. Press Mode button to start the trial operation.
- 5. Press **Mod**e button and select operation mode.
- 6. Trial operation terminates in about 30 minutes and switches into normal mode. To quit trial operation, press **On/Off** button.

Wired Remote Controller (BRC1E73)

- 1. Set to COOL or HEAT operation using the remote controller.
- Press and hold Cancel button for 4 seconds or longer. Service settings menu is displayed.
- Select Test Operation in the service settings menu, and press Menu/OK button. Basic screen returns and "Test Operation" is displayed at the bottom.
- 4. Press On/Off button within 10 seconds, and the test operation starts.
 Monitor the operation of the indoor unit for a 4. minimum of 10 minutes. During test 5. operation, the indoor unit will continue to cool/heat regardless of the temperature setpoint and room temperature.
 - In the case of above-mentioned procedures 3 and 4 in reverse order, test operation can start as well.
- Press and hold Cancel button for 4 seconds or longer in the basic screen.
 Service settings menu is displayed.
- Select Test Operation in the service settings menu, and press Menu/OK button. Basic screen returns and normal operation is conducted.
 - Test operation will stop automatically after 15 ~ 30 minutes. To stop the operation, press **On/Off** button.

■ Wireless Remote Controller (BRC082A43)

- 1. Press button and select the COOL or HEAT operation.
- 2. Press $\bigcup_{i=1}^{\text{WTEST}}$ button twice. "TEST" is displayed.

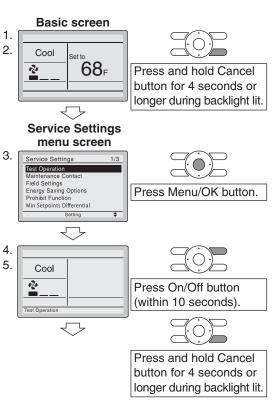

3. Press $\bigcup_{i=1}^{O_{ON/OFF}}$ button within 10 seconds, and the test operation starts.

Monitor the operation of the indoor unit for a minimum of 10 minutes. During test operation, the indoor unit will continue to cool/heat regardless of the temperature setpoint and room temperature.

- In the case of above-mentioned procedures (1) and (2) in reverse order, test operation can start as well.
- Test operation will stop automatically after 15 ~ 30 minutes.

To stop the operation, press button.

Some of the functions cannot be used in the test operation mode.

6. Service Settings 1/3 <u>Isst Operation</u> Hidd Settings Proble Function Min Setpoints Differential Setting Basic screeen

Test Items

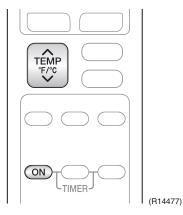

Test items	Symptoms
Indoor and outdoor units are installed securely.	Fall, vibration, noise
Is the outdoor unit fully installed?	No operation or burn damage
No refrigerant gas leaks.	Incomplete cooling/heating function
Refrigerant gas and liquid pipes and indoor drain hose extension are thermally insulated.	Water leakage
Draining line is properly installed.	Water leakage
Does the power supply voltage correspond to that shown on the name plate?	No operation or burn damage
Only specified wires are used for all wiring, and all wires are connected correctly.	No operation or burn damage
System is properly grounded.	Electrical leakage
Is wiring size according to specifications?	No operation or burn damage
Is something blocking the air outlet or inlet of either the indoor or outdoor units?	Incomplete cooling/heating function
Are refrigerant piping length and additional refrigerant charge noted down?	The refrigerant charge in the system is not clear
Pipes and wires are connected to the corresponding connection ports/terminal blocks for the connected unit.	No cooling/heating
Stop valves are opened.	Incomplete cooling/heating function
Check that the connector of the lead wires of the decoration panel is connected securely.	Louvers do not move
Indoor unit properly receives wireless remote control commands.	No operation

4. Field Settings for FTX, FVXS Series4.1 Temperature Display Switch

ARC480 Series

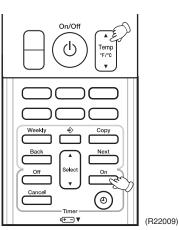

■ You can select Fahrenheit or Celsius for temperature display.

- Press TEMP button and ON TIMER buttons simultaneously for 5 seconds to change the unit of temperature display.
- You can also change the unit of temperature display by pressing **Temp** And ✓ buttons simultaneously for 5 seconds.

ARC466 Series

Press the upper side of **Temp** button and **On** button at the same time for 5 seconds to change the unit of temperature display.

4.2 When 2 Units are Installed in 1 Room

Outline	When 2 indoor units are installed in 1 room, 1 of the 2 indoor units and the corresponding wireless remote controller can be set for different address.	
FTX09/12/15NMV JU	 Remove the battery cover of the remote controller. Cut the address jumper. Press the center of TEMP button and OFF switch on the remote controller at the same time. 	

- 4. Select \Re (address setting) with **TEMP** \land or **TEMP** \checkmark button.
- 5. Press **FAN** button to enter the address setting mode. The indoor unit operation lamp blinks for 1 minute.
- 6. Press indoor unit **ON/OFF** switch while the operation lamp is blinking.
- 7. Press FAN button on the remote controller for 5 seconds to return to the normal mode.

FVXS Series

- 1. Remove the electrical wiring box.
- 2. Cut the address jumper (JA) on the printed circuit board.
- 3. Cut the address jumper (J4) in the remote controller.
- 4. Attach the electrical wiring box as they were.
- 5. Attach the front panel and the front grille as they were.

Indoor Unit PCB

Wireless Remote Controller

Replace the PCB if you cut a jumper unintentionally.

Jumpers are necessary for electronic circuit. Improper operation may occur if you cut any of them.

Caution

Replace the remote controller if you cut a jumper unintentionally.

Jumpers are necessary for electronic circuit. Improper operation may occur if you cut any of them.

4.3 Jumper and Switch Settings

Jumper for FTX18/24UVJU, FVXS series

Jumper on indoor unit PCB	Function	When connected (factory setting)	When cut
JB	Fan speed setting when compressor stops for thermostat OFF. (effective only at cooling operation)	Fan speed setting; Remote controller setting	The fan stops.
JC Power failure recovery		Auto-restart	The unit does not resume operation after recovering from a power failure. Timer settings are cleared.

Switch for FVXS series

Switch on indoor unit PCB	Function	OFF (factory setting)	ON
SW2-4	Upward airflow limit setting	Exposed or half embedded installation	Set the switch to ON position when you install the indoor unit embedded in the wall to avoid condensation.

BReference

For the location of the jumper and the switch, refer to the following pages. FTX18/24UVJU: page 29 FVXS: page 31

5. Field Settings for FDMQ Series5.1 How to Change the Field Settings

Outline

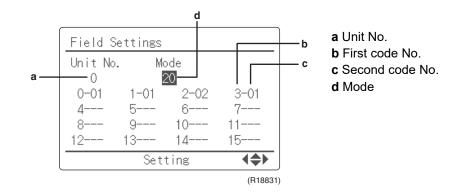

If optional accessories are mounted on the indoor unit, the indoor unit setting may have to be changed. Refer to the instruction manual for each optional accessory.

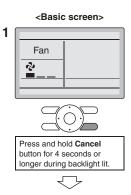

When using 2 remote controllers for 1 indoor unit, change the field settings from MAIN remote controller. Note that the field settings can not be set from SUB remote controller.

Procedure

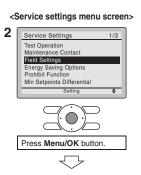

BRC1E73 Wired Remote Controller

1. Press and hold **Cancel** button for 4 seconds or longer. Service settings menu is displayed.

2. Select Field Settings in the Service Settings menu, and press Menu/OK button. Field settings screen is displayed.

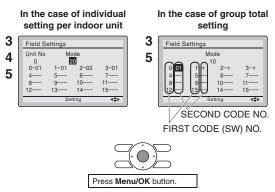

3. Highlight the mode, and select desired "Mode No." by using $\blacktriangle \nabla$ (Up/Down) button.

4. In the case of setting per indoor unit during group control (When Mode No. such as 20, 22, 23, 25 are selected), highlight the unit No. and select "Indoor unit No." to be set by using ▲ ▼ (Up/Down) button. (In the case of group setting, this operation is not needed.)
In the case of individual setting per indoor unit, current settings are displayed. And, SECOND CODE NO. " - " means no function.

 Highlight SECOND CODE NO. of the FIRST CODE NO. to be changed, and select desired "SECOND CODE NO." by using ▲ ▼ (Up/Down) button. Multiple identical mode number settings are available.

In the case of setting for all indoor units in the remote control group, available SECOND CODE NO. is displayed as " * " which means it can be changed. When SECOND CODE NO. is displayed as " - ", there is no function.

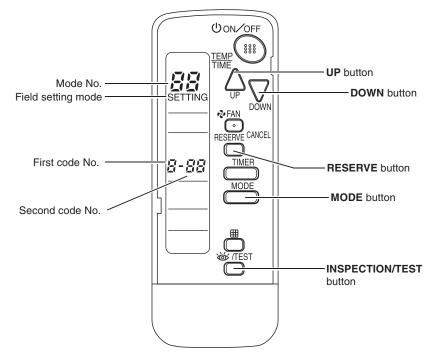

<Service settings screen>

- 6. Press Menu/OK button. Setting confirmation screen is displayed.
- 7. Select Yes and press Menu/OK button. Setting details are determined and field settings screen returns.
- 8. In the case of multiple setting changes, repeat 3 to 7.
- 9. After all setting changes are completed, press Cancel button twice.
- 10. Backlight goes out, and [Checking the connection. Please stand by.] is displayed for initialization. After the initialization, the basic screen returns.

BRC082A43 Wireless Remote Controller

R7000287

To set the field settings, you have to change:

- Mode No.
- First code No.
- Second code No.
- 1. When in normal mode, hold down ₩/TEST button for at least 4 seconds to enter the Field Set mode.
- 2. Select the desired Mode No. with **MODE** button.
- 3. Press \bigoplus_{P} button and select the First code No.
- 4. Press \bigcup_{DOWN} button and select the Second code No.
- 5. Press **RESERVE** button to confirm the settings.
- 6. Press 1/TEST button to quit the Field Set mode and to return to normal display again.

5.2 Overview of Field Settings

Mode	First	Second Code No.						
No.	Code No.		01		02	03	Description of setting	
	0	Light★	Approx. 2,500 hrs.★	Heavy	Approx. 1,250 hrs.	_	change filter cleaning display	Longlife filter
10 (20)	0		Approx. 200 hrs.★	He	Approx. 100 hrs.	—		Standard filter
	3		Display★		No display	—	Filter cleaning sign (used to set filter cleaning display ON/OFF)	
11 (21)	7		OFF★ Air volume adjustment completion		Air volume adjustment start	Air volume adjustment		

★ Factory Setting

■ The Second Code No. is factory set to "01".

- Do not use any settings not listed in the table.
- For group control with a wireless remote controller, initial settings for all the indoor units of the group are equal.

For group control, refer to the installation manual attached to the indoor unit for group control.

External Static Pressure Settings

12 class					
Mode No.	First Code No.	Second Code No.	External static pressure		
		03	30 Pa		
		04	40 Pa		
	6	05 ★	50 Pa ★		
		06	60 Pa		
		07	70 Pa		
		08	80 Pa

5.3 MAIN/SUB and Address Setting for Wireless Remote Controller

Outline

- If setting multiple wireless remote controllers to operate in one room, perform address setting for the receiver and the wireless remote controller.
- If using both a wired remote controller and a wireless remote controller with 1 indoor unit, change the MAIN/SUB switch of the signal receiver PCB.

Signal Receiver PCB Setting

(R24951)

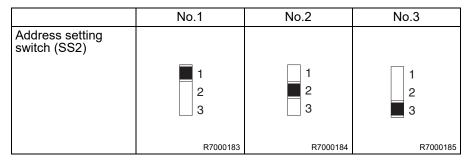

MAIN/SUB switch

Set the MAIN/SUB setting switch (SS1) on the signal receiver PCB to SUB.

	MAIN	SUB
MAIN/SUB setting switch (SS1)	M S	M S
	R7000181	R7000182

Wireless address switch

Set the address setting switch (SS2) on the signal receiver PCB according to the table below.

Wireless Remote Controller Address

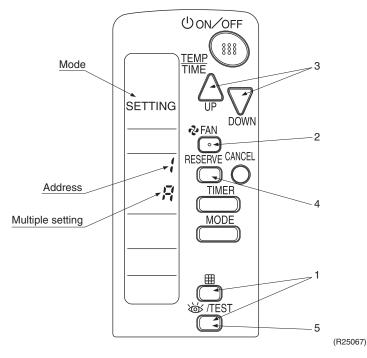

Factory set is 1. Change the wireless remote controller address setting by the following steps, if necessary.

- 1. Hold down ⊞ button and ‰/TEST button at the same time for at least 4 seconds to enter the field setting mode. (SETTING is indicated on the display).
- 2. Press RFAN button and select display setting (g or b). Each time the button is pressed, the display switches between g and b.
- 3. Press \bigoplus button and \bigoplus button to set the address.

$$+1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 5 \rightarrow 6$$

Address can be set from $1 \sim 6$, but set it to $1 \sim 3$ and to same address as the receiver. The receiver does not work with address $4 \sim 6$.

- Press RESERVE button to confirm the setting.
- 5. Hold down 6/TEST button to quit the field setting mode and return to the normal display.

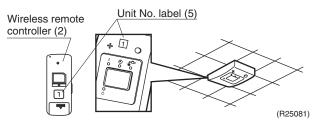

Multiple Settings

When the indoor unit is controlled by an outside controller (central remote controller, etc.), the indoor unit sometimes does not respond to ON/OFF command or temperature setting command from the wireless remote controller. Check what setting the customer needs and make the multiple setting as shown below.

Remote	Controller	Indoor Unit		
Multiple settings	Remote controller display	To control other air conditions and units	For other than on left	
g: Standard All items displaye		Commands other than ON/OFF and temperature setting accepted. (1 LONG BEEP or 3 SHORT BEEPS emitted)	All commands accepted. (2 SHORT BEEPS)	
b: Multi System Operations remain displayed shortly after execution		All commands accepte	d. (2 SHORT BEEPS)	

After Setting

Stick the Unit No. label on the receiver and the back of the wireless remote controller.

Set the Unit No. of the receiver and the wireless remote controller to be the equal. If the settings differ, the signal from the remote controller cannot be transmitted.

6. Field Settings for Outdoor Unit

6.1 Facility Setting (cooling at low outdoor temperature)

Outline

This function is limited only for facilities (the target of air conditioning is equipment such as computers). Never use it in a residence or office (the space where there is a human).

Details

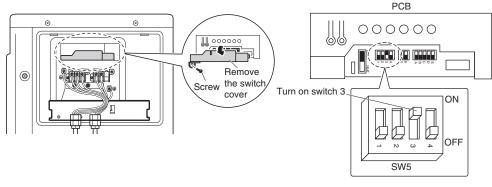

09/12/15 class

Cutting jumper 6 (J6) on the circuit board will expand the operation range down to $5^{\circ}F$ ($-15^{\circ}C$). However it will stop if the outdoor temperature drops below $-4^{\circ}F$ ($-20^{\circ}C$) and start back up once the temperature rises again.

- (1) Remove the top plate of the outdoor unit. (09/12 class: 3 screws, 15 class: 6 screws)
- (2) Remove the front plate. (09/12 class: 4 screws, 15 class: 8 screws)
- (3) Cut the jumper (J6) of the PCB inside.

18/24 class

Turning on SW5-3 on the PCB will extend the operation range to $14^{\circ}F$ ($-10^{\circ}C$). Installing an air direction adjustment grille (sold separately) will further extend the operation range to $-4^{\circ}F$ ($-20^{\circ}C$). In these cases, the unit will stop operating if the outdoor temperature falls below $-4^{\circ}F$ ($-20^{\circ}C$), restarting once the temperature rises above this level.

R7000285

Caution

For the location of the jumper, refer to pages 37, 39, 41.

Replace the PCB if you cut a jumper unintentionally.

Jumpers are necessary for electronic circuit. Improper operation may occur if you cut any of them.

- If the outdoor unit is installed where the heat exchanger of the unit is exposed to direct wind, provide a windbreak wall.
- Intermittent noises may be produced by the indoor unit due to the outdoor fan turning on and off when using facility settings.
- Do not place humidifiers or other items which might raise the humidity in rooms where facility settings are being used.

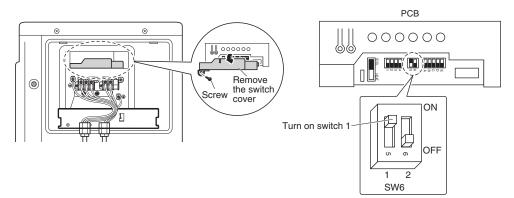

A humidifier might cause dew jumping from the indoor unit outlet vent.

• Cutting jumper sets the indoor fan tap to the highest position.

6.2 Drain Pan Heater

When attaching the drain pan heater

- 1. Attach the drain pan heater in accordance with the installation manual included with the drain pan heater.
- 2. Turn on SW6-1 on the PCB.

R7000288

7. Silicone Grease on Power Transistor/Diode Bridge

Outline

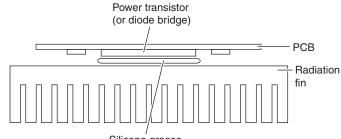

Apply the specified silicone grease to the heat radiation part of a power transistor/diode bridge when you replace an outdoor unit PCB. The silicone grease encourages the heat radiation of a power transistor/diode bridge.

Details

- 1. Wipe off the old silicone grease completely.
- 2. Apply the silicone grease evenly. See the illustrations below for examples of application.
- 3. Tighten the screws of the power transistor/diode bridge.
- 4. Make sure that the heat radiation parts are firmly contacted to the radiation fin.

Note: Smoke emission may be caused by bad heat radiation when the silicone grease is not appropriately applied.

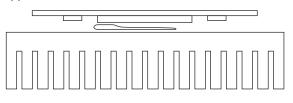

OK: Evenly applied

Silicone grease

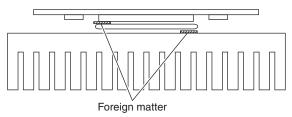

(R22541)

NG: Not evenly applied

(R21866)

NG: Foreign matter is stuck.

(R21867)

- Daikin products are manufactured for export to numerous countries throughout the world. Prior to purchase, please confirm with your local authorized importer, distributor and/or retailer whether this product conforms to the applicable standards, and is suitable for use, in the region where the product will be used. This statement does not purport to exclude, restrict or modify the application of any local legislation.
- Ask a qualified installer or contractor to install this product. Do not try to install the product yourself. Improper installation can result in water or refrigerant leakage, electrical shock, fire or explosion.
- Use only those parts and accessories supplied or specified by Daikin. Ask a qualified installer or contractor to install those parts and accessories. Use of unauthorized parts and accessories or improper installation of parts and accessories can result in water or refrigerant leakage, electrical shock, fire or explosion.
- Read the user's manual carefully before using this product. The user's manual provides important safety instructions and warnings. Be sure to follow these instructions and warnings.

If you have any inquiries, please contact your local importer, distributor and/or retailer.

Cautions on product corrosion

Air conditioners should not be installed in areas where corrosive gases, such as acid gas or alkaline gas, are produced.
 If the outdoor unit is to be installed close to the sea shore, direct exposure to the sea breeze should be avoided. If you need to install the outdoor unit close to the sea shore, contact your local distributor.
